

Objective:-

Motivated and detail-oriented software engineer seeking challenging opportunities to apply my skills in software development, enhance organizational success, and drive personal growth.

Technical Skills:-

- **Programming Languages:** Python, Java, JavaScript, SQL
- **Web Development:** React, Django, Django REST Framework (DRF), HTML, CSS
- **Databases:** MySQL
- **Tools:** PyCharm, Visual Studio, MySQL Workbench
- **Version Control:** Git, GitHub

Projects:-

Product Listing Portal

- Developed a full-stack web application using **React**, **Django**, and **MySQL**.
- Key Features:
 - User authentication (login, logout, and password management).
 - Product search functionality and shopping cart integration.
 - Purchase history tracking for users.
- Leveraged **Django REST Framework (DRF)** for API development to ensure scalability and seamless user-product management.
- **Source Code:** [GitHub Repository](#)

Doctor Appointment System

- Designed and implemented a **Doctor Appointment System** using **React**, **Django**, and **MySQL**.
- Key Features:
 - Patient registration and appointment scheduling.
 - Role-based access control for doctors, receptionists, and patients.
 - A dashboard with graphical insights for patient demographics and appointment trends.
- Enhanced administrative decision-making through analytics and secure data handling.
- **Source Code:** [GitHub Repository](#)

Leave Management System

- Built a **Leave Management System** using **Django REST Framework**, **HTML**, **CSS**, **AJAX**, and **jQuery**.
- Key Features:
 - Role-based access control for secure system usage.
 - Employee leave application with real-time updates.
 - Leave balance tracking for employees.
 - Managerial access to approve/reject leave requests.
- Streamlined leave processes while reducing manual intervention.

Education:-

Bachelor of Technology (B.Tech) in Computer Science and Engineering
Seemanta Engineering College, Mayurbhanj, Odisha, India

2019-2023
