PROJECTS

1. Booking Engine Booking Software for Hospitality industry

- Engineered a booking system with zero loading time, ensuring instant response and enhancing user experience.
- Implemented tracking for failed and attempted bookings, providing valuable insights for improving system reliability.
- Developed comprehensive coupon and add-on service management features, enabling hoteliers to offer promotions and additional services effortlessly.
- Utilized cloud-based solutions for scalability and reliability, leveraging services like AWS for hosting and database management.

2. Property Management System

- Architected and developed a comprehensive Property Management System (PMS) utilized by over 5+ hotels, streamlining operations and enhancing efficiency by 50%. ● Integrated advanced booking and reservation management features, reducing manual processing time by 50% and increasing booking accuracy.
- Designed the PMS with a scalable microservices architecture, ensuring high availability and reliability, resulting in a 99.9% system uptime.
- Developed a user-friendly interface with customizable dashboards, enhancing usability and reducing training time for hotel staff by 30%.
- Integrated third-party APIs for seamless connectivity with existing hotel systems, such as point-of-sale (POS) systems and customer relationship management (CRM) tools. ● Monitored and analyzed system performance, implementing continuous improvements and updates that enhanced system functionality and user satisfaction.

Leadership

- **Successfully built and led a high-performing technology team of 5 developers and engineers, fostering a collaborative and innovative work environment that increased project delivery speed by 25%.**
- **Coordinated cross-functional teams, effectively managing communication between developers, designers, and stakeholders to ensure alignment with business goals and customer needs.**
