ABOUT ME

I am a 1+ year experienced, demonstrating a proactive approach and dedication to my work. My strength lies in collaborating seamlessly within a team, contributing effectively both as an individual and as an integral team member. I prioritize interpersonal connections to successfully achieve common objectives.

SKILLS HIGHLIGHTS

- REACTJS
- JAVASCRIPT
- Java
- Spring Boot
- JPA
- JDBC Template
- MICROSERVICES
- JWT
- SQL (MYSQL, Oracle, Postgres)
- MYBATIS
- HTML
- CSS
- KAFKA
- AWS (Basic Knowledge)
- Git

HOBBIES

- Watching Movies
- Listening Music

EDUCATION

- 2013, (SSC) ZP High School (Theegarajupally)
CGPA: 9
- 2015, (HSC) RDF-VAPV Junior College (Warangal)
CGPA: 9
- 2018, (B.Sc) Masterji Degree & PG College (Warangal),
Percentage: 62
- 2022, (M.Sc - Mathematics & Computers) New Science PG College (Warangal),
CGPA: 7

CAREER OBJECTIVE

I am seeking a highly rewarding career opportunity that allows me to leverage my skills and knowledge to contribute to both organizational and personal growth

EXPERIENCE

C-Tel Infosystems Pvt Ltd

[Dec'2022 – Dec' 2023]

[Associate Software Engineer]

1) MAK Lubricants QR Application

Designation: Software Engineer

Client: Bharat Petroleum Corporation Ltd (BPCL)

TECHNOLOGIES: REACTJS, Microservices, Kafka, Postgres, JPA

- Created UI Screens using React for the project to track BPCL products' journey from warehouse to end-users.
- Designed an intuitive user interface to enhance product tracking and tracing efficiency.
- Played a pivotal role in ensuring seamless communication of product information.
- Enhanced React application by implementing a security module to bolster data protection and user authentication.
- Track and trace application for the production, storage, and delivery of lubricant products.
- Involves the use of QR codes for identification and tracking.
- Components include hardware (printer, applicator, scanner, Wi-Fi router) and application software (QR generation, tracking, and WMS software).
- Total solution implementation with integration into BPCL's ERP (SAP) and other IT systems.
- Bidirectional flow of command and data through APIs, standard internet protocols, or industry-standard methods.
- Centralized and scalable solution for monitoring and controlling activities across the entire supply chain.

Roles and Responsibilities:

- Requirement collection from Team Lead.
- Client interaction for understanding and clarifying requirements.
- Coding of all necessary POJOs (Plain Old Java Objects) for the system.
- Coding of service classes.
- Integration of BPCL SAP System into the application for bidirectional communication.
- Development of Rest APIs for Android.
- Bug fixing and performance improvement.

2) DATA SYNCHRONIZATION APPLICATION

TECHNOLOGIES: KAFKA, SPRINGBOOT, JPA, POSTGRES, MYSQL.

- Implemented Change Data Capture (CDC) system using Apache Kafka, reducing data synchronization time by 30%.
- Designed a scalable architecture handling 10,000+ database transactions/minute, ensuring data consistency.
- Collaborated across teams to integrate CDC system, minimizing data discrepancies by 95%.
- Developed expertise in Java technologies (Servlets, JSP, JDBC), Spring framework, and microservices architecture.
