GitHub: github.com/chandan-isaqt LinkedIn: linkedin.com/in/chandan-das/

Professional Summary

Enthusiastic Fresher Flutter Developer with hands-on experience in building cross-platform mobile applications using Flutter and Dart. Skilled in creating responsive user interfaces, developing reusable widgets, and managing application state using GetX. Familiar with REST API integration, SQLite local storage, and generating release builds for the Google Play Store. Eager to learn, grow, and contribute to a professional Flutter development team.

Technical Skills

Core Expertise: Flutter Development

Programming Languages: Dart, JavaScript, Python, C

Frontend (Web): React.js, HTML, CSS

Backend (Web): Node.js, Express.js

Databases: MongoDB, Firebase Cloud Firestore, SQLite

State Management: GetX

Firebase Services: Firebase Authentication, Cloud Firestore, REST API Integration

Deployment & Distribution: Google Play Store Deployment, Play Console, App Signing, Versioning

Tools & IDEs: Git, GitHub, Android Studio, VS Code, Xcode

Professional Experience

Flutter Developer (Fresher)

2026 – Present

Academic and Personal Projects

- Designed and developed multiple Flutter mobile applications through academic projects and self-learning.
- Applied GetX for efficient state management, navigation, and dependency injection.
- Created reusable and responsive UI components following clean code and best practices.
- Implemented SQLite for local data storage to support offline functionality.
- Integrated RESTful APIs, handled JSON parsing, and used asynchronous programming in Dart.
- Generated APK and App Bundle (AAB) files and gained hands-on exposure to Google Play Console processes.

Achievements

Second Position – College Coding Competition

Participated in an intra-college coding competition and secured second position by solving algorithmic and logical problems using C programming, gaining strong experience in problem analysis, efficient coding, and time management under competitive conditions.

Intra-College Hackathon Competition

Participated in an intra-college hackathon where I gained practical experience in problem analysis, teamwork, rapid prototyping, and application development under time constraints.

Key Projects

WordLyric — Dictionary Application (Android , iOS)

Dec 2025 – Jan 2026

Independently designed and developed a comprehensive Flutter application combining dictionary, daily quiz, and goal tracking functionalities. The app provides word definitions, synonyms, along with daily quizzes for knowledge practice and a goal tracker to plan and monitor personal tasks. Implemented REST API integration for word data, SQLite for offline storage, and optimized performance using reusable widgets and GetX state management. Additional features include search history, favorite words, ensuring a responsive and engaging user experience.

CCLMS EDUTECH ERP Application (Android , iOS — Group Project)

Dec 2025 – Feb 2026

Developed and deployed an Android-based ERP application using Flutter to digitize and manage educational institute operations. The application allows students to view fee details, track attendance, access batch information, download certificates, and participate in online exams through an integrated LMS module. Implemented secure login with Two-Factor Authentication (OTP-based verification) integrated with a Laravel backend API. Designed student profile management with real-time data handling through RESTful APIs. Utilized GetX for state management, form validation for secure data input, and Shared Preferences for session management and local storage of user credentials. Integrated additional packages for API integration, PDF certificate handling, and responsive UI to enhance performance and user experience. **Successfully published the application on Google Play Store for public access.**

Doctor's Appointment Management Application (Group Project)

Feb 2026 – Present

Developed an Android-based Flutter application as part of a team to solve real-life appointment scheduling problems between doctors and patients. The application enables patients to book appointments, view doctor availability, and manage appointment history. Contributed to UI development, state management using GetX, form validation, and local data handling.

Education

Bachelor of Computer Applications (BCA)

Contai College of Learning and Management Science

1st Semester SGPA: 7.50

2nd Semester SGPA: 7.59

3rd Semester SGPA: 8.33

Higher Secondary (12th)

Ramnagar Rao High School

Percentage: 74%

Secondary (10th)

Ramnagar Rao High School

Percentage: 66%

Additional Information

Hands-on experience in developing Flutter applications and preparing release-ready builds for the Google Play Store. Familiar with Google Play Console workflows, multi-platform Flutter builds, and application testing. Strong problem-solving skills, self-motivated, hardworking, and a quick learner, eager to explore new technologies and grow as a Flutter developer through continuous self-learning.
