PROJECTS

Online Timber Transit Permit System, Odisha (OTTPS):

Technologies used:

Backend - Python (Django), Django Rest Framework (DRF)

Frontend - HTML5, CSS3, Javascript, Jinja Templating, Bootstrap, jQuery

Database - Postgresql

- The Online Timber Transit Permit System, Odisha (OTTPS) is an online application where the citizens and the institutions can apply for TT Permit. This system eradicates lengthy and tired some manual procedure of getting timber transit permit.
- TT Permit is issued online to the applicants.
- Applicants can also track the status of their application.

DOC360:

Technologies used:

Backend - Python (Django), Django Rest Framework (DRF)

Frontend - HTML5, CSS3, Javascript, Jinja Templating, Bootstrap, jQuery

Database - MySQL

- This is an OCR based Document Management System which has been developed for seamless management of our essential documents.
- User can login using their Mobile No and OTP and manage their personal documents with the ease of their fingertip.
- User can upload documents like any PDF, word or image file into their portal and then can search the contents of their documents or any specific document using the search bar.
- OCR is performed for each document which is stored which enables the user to search for any specific keyword in their document.

Django TODO Application

- Designed a TODO App using Django at the backend and rendered templates using Django Templating Language (Jinja Templating).
- For Designing Frontend, I had used HTML, CSS & Bootstrap.

The application has following features:

- Django's built-in Authentication System - User can register and log in and manage his personalized TODO.

- User Based TODO Management - Post Logging in User can view, add, delete his respective TODO and also can Mark a TODO as completed.
- Sending E-Mail to User on adding a new task - Whenever user adds a TODO, an E-mail is sent to him with the title and description.

RESTful APIs using Flask in Python with MySQL Database:

- Here, I had designed one MySQL database schema and connected my database to my Python Application. And, using flask microframework of Python I made different RESTful API end points to add and update the database.
- Also, for reading and deleting data from the database by using various HTTP methods like GET, POST, PUT and DELETE.

EDUCATION

October 2024	Master's in Computer Application (MCA) Manipal University, Jaipur, Rajasthan
