SKILLS

Technical Skills

Language :	HTML, CSS, JS Advance	Python Advance	C Advance
Frameworks:	Django Advance	React Js Advance	Bootstrap Advance
	React Native Beginer	Django DRF Intermediate	Tailwind CSS Intermediate
	Redux Intermediate	Wordpress Intermediate	Tkinter Intermediate
Deployment/Tools:	Linux Server Intermediate	AWS Beginner	Firebase Intermediate
	Git/ Github Intermediate	My SQL Intermediate	Mongo DB Intermediate
	REST API's Intermediate	Figma Advance	
Soft Skills	Communication Skill	Team-Player	Self Learner
	Time Management	Adaptability	Focused
	Critical Thinking	Experimentation	Active Listening
	Initiative	Patience	Self motivated

EXPERIENCE

Freelance Web Developer | Self-employed | July 2023 - Present

Webokraft Solutions (Startup)

- **Client Acquisition and Relationship Management:** Approached and pitched web applications and software solutions to diverse clients, highlighting how these tools can improve their business performance and streamline operations.

- **Design and Development:** Led the design and development of user-friendly Figma designs, websites, web apps, and small software solutions tailored to client needs.
 - **Client Communication and Progress Reporting:** Maintained consistent communication with clients, providing regular updates on project progress, ensuring alignment with their expectations and timelines.
 - **Project Delivery:** Successfully completed 2 large-scale projects and multiple smaller projects within a year, consistently meeting deadlines and client requirements.
-

PROJECTS

- **Algo-Trading**

(Minor Project)

Dec 2021 - Feb 2022

<https://devraaz-algotrading-sma-rsi-65o8fv.streamlit.app/>

Developed a Python-based backtesting app with Streamlit to simulate trading strategy performance over 4-5 years. Integrated technical indicators (EMA and RSI) to identify entry/exit points, enhancing trade accuracy.

Technologies: Python, Streamlit, Pandas, NumPy, Matplotlib

- **Search Nearby Hostel**

(Major Project)

May 2022-July 2022

<https://domitary.pythonanywhere.com>

Developed a multi-user web application using Django to assist students in finding accommodation, such as hostels and dormitories, within specified locations.

- Led a team of four, delegating roles and tasks to ensure efficient collaboration and timely delivery.
- Designed and implemented the backend system, incorporating advanced search functionality and filtering options for precise accommodation results.
- Developed an admin panel for uploading and managing hostel details and a student panel for viewing availability and booking accommodations.
- Delivered an intuitive and user-friendly platform, streamlining the process for students to find and book hostels with ease.

Technologies: Django, MySQL, HTML, CSS, JavaScript, Bootstrap

- **Hotel Management System**

(Personal Portfolio Project)

June 2023-Sept 2023

<https://mydemoservice.pythonanywhere.com>

Developed a hotel management system using Django to automate the booking process and enhance operational efficiency.

- Designed and implemented both frontend and backend, delivering a complete and functional single-user application.
- Key Features:
 - Room Management: Streamlined room availability and allocation.
 - Booking System: Enabled seamless reservation handling.
 - Payment Integration: Integrated payment gateways for secure transactions.
- Successfully demonstrated the potential of technology in automating hotel operations.

- **E-Commerce Website**

(Startup cum Portfolio Project)

August 2024-Sept 2024

<https://fashionnana.webkraft.in>

Developed an e-commerce platform for a clothing business using Django REST Framework (DRF) and React.js, aimed at establishing an online clothing hub and portfolio website.

- Designed and implemented RESTful APIs for backend functionality with DRF, and built a dynamic, responsive frontend using React.js.
- Integrated features such as admin panel, analytics, inventory management, product search and filters, and order placement, ensuring a seamless user experience.
- Overcame challenges related to limited stock by implementing efficient inventory tracking and management.

Technologies: DRF , MySQL, , React Js, API's, Redux

- **Academy Management WebApp**

Website cum Management Webapp

October 2023-March 2024

<https://nikhil.academy>

Developed a comprehensive web application to streamline academic management for an educational institution with multiple centers across different locations.

- Key Features:
 - **Center Coordinator Management:** Enabled seamless communication and coordination between centers.
 - **Course Management:** Simplified course creation and tracking for multiple locations.
 - **Student Management:** Improved student data handling and enrollment processes.
 - **Grading & Certificate Generation:** Automated evaluation and certificate issuance.
 - **Certificate Verification:** Implemented online verification to enhance authenticity and reduce manual workload.
- **Outcome:** Boosted administrative efficiency by centralizing operations, reducing data handling complexities, and improving back-office processes by 50%.

- **ERP School Management System**

Web + Mobile Application

October 2024 - Present

Developing a comprehensive single-user web and mobile application to streamline academic management processes for schools and colleges.

- Technologies Used: React.js, Redux, React Router DOM, React Native.
- Key Features:
 - Class Management: Simplified scheduling and organization of classes.
 - Student Management: Centralized student records and performance tracking.
 - Staff Management: Streamlined staff roles, schedules, and communication.
 - Course Management: Efficient creation and administration of courses.
 - Attendance Management: Automated attendance tracking for classes.

- Exam Management: Organized scheduling and grading processes.
- Fees Management: Simplified fee collection and record-keeping.
- Outcome: Enhanced overall management efficiency by centralizing operations, streamlining data handling, and automating activities such as fee collection and attendance tracking from a single platform.

- **Pathology Clinic Software**

Desktop Application (Subhashree Clinic, Koraput)
October 2024 - Present

Developing a comprehensive single-user Pathology Clinic Test Management System to streamline clinic operations.

- Technologies Used: PyQt, Qt Designer, MySQL.
- Key Features:
 - Patient Management: Efficient handling of patient records and data.
 - Test Management: Organized test cataloging and result tracking.
 - Patient-Test Management: Integrated functionality for managing patient test assignments and results.
- Outcome: Improved operational efficiency and workflow, enabling accurate and effective result management for the clinic.

EDUCATION

Bachelor in Technology - Gandhi Engineering College (Bhubaneswar)
(2018-2024)

8.71 CGPA

+2 - Vigyan Junior College (Koraput)
(2016-2018)

79.8 %

ACHIEVEMENTS

- Led a group of 4 members in Final year Project.
- Got First Prize in Robotics Competition in College Fest.

CERTIFICATIONS

- Programming in C Certification form NPTEL

HOBBIES

- Reading Books
- Sketching
- Playing Flute
- Jogging & Workout
