

A Dheeraj Kumar
Software Developer

E-Mail: akuladheeraj.k@gmail.com
Cell No: +91 9121606689

OBJECTIVE:

I Intend to establish myself as a Developer with an integrated business solution through a long-time commitment, contributing to the company's growth and in turn ensuring personal growth within the organization. I believe that my learning and implementing my technical, functional and communication skills will enable me to face the challenging career ahead.

PROFESSIONAL SUMMARY:

Having 1.5+ years of experience in complete software development life cycle.

Hands-on experience in **ReactJS**, **JavaScript**, **TypeScript**, **NextJS**, **React-testing-library**, **SonarQube**, API's, HTML, CSS, Antd.

Hands-on experience in building Reusable Common Components and Styled Components.

Experienced in building TreeGraphs and BarGraphs with Antv/G6 and Chartjs.

Experienced in writing quality code and writing Unit Test Cases in React-Testing-Library and with SonarQube for analyzing code quality.

Involved in Requirement discussions, Sprint planning & Sprint grooming meetings.

Good team player and have the ability to work independently in a time-sensitive environment and having good Debugging skills.

Self-starter and ability to adapt and learn new things quickly, can handle multiple tasks to meet deadlines in pressure situations.

WORK EXPERIENCE:

Software developer for **Datafoundry Pvt Ltd**, Hyderabad, **from Sep 2022 to till date**.

EDUCATION:

B.Tech. (ECE) from TKR, Hyd in 2022.

TECHNICAL SKILLS:

Libraries	Reactjs, Redux / FrameWork : NextJS
Languag	JavaScript, TypeScript, Unit tests, HTML, CSS
Tools	VS Code, Bitbucket, Jira, SonarQube

PROJECTS:

PROJECT #1:

DF Expense Management:

DF Expense Management application, where the employees claim for monthly expenses spent for company requirements. Here, All the employees in the company can upload their bills and claim the bills. Here, once the bill's are uploaded the bills follow a specific flow towards the higher management.

Employee -> Manager -> CCO ->VO ->AO -> Finance Team.In this entire flow everyone has the rights to approve or reject the bills. Using this portal every employee in the company can claim their bills instantly.

Responsibilities:

Requirement Analysis and Interpreting design using ReactJS.
Coordinating team on development and for api integrations.
Interpreting design in HTML, CSS, JavaScript, Bootstrap, Antd.

PROJECT #2:

DF Digitalize AI:

DF Digitalize AI enables the Pharmaceutical, Cosmetic and HealthCare companies to extract value faster and more effectively from their data assets. This project is useful to extract the drug safety information and process the uploaded documents with ML algorithms.

By using AI & ML services we are able to retrieve the Drug safety information and entities relation in Processed documents. And we display these documents in application with extracted entities according to the user requirements and it helps to analyze the relations and make a case study of the drugs and their side effects.

Responsibilities:

Create the Responsive and fully functional User interface based on the requirements using ReactJS.

Creating the Custom hooks, Reusable components, styled components for better reusability.

Writing Unit Test Cases for every component, and SonarQube for better Code Quality.

Coordinating with the backend team for api integrations for data transfers with DataBase.

CUSTOM LIBRARIES:

LIBRARY #1:

KNOWLEDGE-GRAPH:

Knowledge-Graph is a common library which is dependent on AI & ML services. Once the documents that we have uploaded get processed, it will generate the Excel output format which consists of entities, relations between drugs and the disease.

Here, we will show all these relations in Bubble Charts and Bar Graphs for better user experience.

Responsibilities:

Creating the responsive custom library with Custom Components and Styled Components.
Coordinating with the backend team for api integrations for all the graphs.

Using Lifecycle methods for data handling and delay from API's for better performance and experience.

LIBRARY #2:

UX-LIBRARY:

UX-Library is a common library which is integrated in all the DF-Applications. This Library consists of all the components which are common in all the DF-Applications.

These custom components are integrated in all the applications according to their requirements.

Responsibilities:

Creating the custom components with custom hooks for better reusability across the projects.
Coordinating with the backend team for API's , Authentication details and login responses.
Integrating these components in DF-DigitalizeAI project and modifying according to the requirements
