Careerobjective

Motivated and dedicated Software engineer with 4years 2 months of progressive experience in programming. Possess Bachelor's Degree in Computer Science Engineering and profound knowledge in Core Java and Spring Boot. A quick learnerand self-starter withstronginterpersonalskills . Seekinga responsible position to contribute to the growth and vision of organisation while enhancing technical skills.

SoftwareSkills

- **Languages/Technologies:**Java,RestfulWebservices,MicroService
- **Frameworks:**Spring(IOC,MVC,Boot),Data-JPA,Collection, Hibernate
- **Database:** MySQL
- **DevelopmentTools:**Eclipse,VisalstudioCode,SpringToolSuite
- **Web/ApplicationServer:**ApacheTomcate8
- **WebTechnologies:**Angular,HTML, CSS, javascript
- **Documentation:**MS-Office(Word,ExcelandPowerPoint)

Education

B.TechinInformationTechnology

CVRamanCollegeOfEngineering,BPUT(2015– 2019)

Experience

Currently Working as in **Smart Edge Software Pvt.Ltd**,
Bhubaneswar from November 2020 to till Date.

Project1: Development of Web application for Health Care business process

Technologies Used: Java, Spring Boot, Spring Data JPA, MYSQL, Restful web Services, Maven, Angular, Rest API

This project deals with development of data management system for handling patient's data, staff data, treatment details and billing in effective way. The application provides data in single document for each entity as per requirement. The following tasks were carried out for developing this application.

- Created java classes such as **Controller & Services** using spring boot module for patient registration & treatment details
- Developed a **Dao layer** interface and implemented Business logic in service layer for accessing the database
- Created a Custom class for **Global Exception Handling** to handle exceptions and send proper response to client
- Created POJO classes in Hibernate for mapping to entity database
- Designed components for UI using Angular

Project2: Development of Loan Management Platform for organisation

Technologies Used: Java, Spring Boot, Spring Data JPA, MYSQL, Restful web Services, Maven, Angular , Javascript

A loan management platform helps automate every stage of the loan lifecycle, from application to closing .

The system deals with application management, verification, sanction, EMI calculation, Disbursement and monitoring till closure of loan. In this project , different modules were developed as follows:

- Developed **Controller & Services** classes using Spring Boot modules
- Implemented **data access Layer** (Data access layer) using Spring Data and Hibernate **ORM Tool**
- developed **POJOs** for Data Model

I hereby declare that above statements are true to the best of my knowledge and belief.
