SKILLS

- ❖ **Programming Languages:** Python
- ❖ **Web & Backend Technology:** HTML, CSS, JavaScript, React js.
- ❖ **Database & Technology:** DBMS, SQL, MySQL.
- ❖ **Software Engineering Concepts** OS, SDLC
- ❖ **Technologies & Tools:** MachineLearning, GitHub, VS Code
- ❖ **Soft Skills:** StrongCommunication, Analytical Thinking, Problem Solving, Collaborative.

EDUCATION

- ❖ Master of Computer Applications | GITA Autonomous College CGPA: 9.00 | 2025
- ❖ Bachelor of Science | Sahaspur Degree College CGPA: 8.08 | 2022

INTERSHIPS

Python Developer

OCTANET | 1Month

- Developed a **Python-based ATM Machine Simulation** featuring secure user authentication, PIN management, and real-time transaction processing.
- Enforced essential banking operations such as **balance inquiry, cash deposit, withdrawal, and transaction history**, ensuring an intuitive user experience.
- Conducted user testing and feedback analysis to enhance reliability and reduce manual workload.

PROJECTS

Employee Management System

Technologies Utilized: Python.Django , (JWT), http-cookies, MySQL, React.js, Tailwind CSS.

- Executed a secure **Employee Management System** with robust employee **CRUD** operations (Create, Read, Update, Delete), integrating **JWT** authentication for seamless and secure admin access.
- Implemented **OTP-based authentication** for password recovery and email updates for admin, alongside secure session management using **JWT** and **cookies** to ensure persistent admin authentication.
- Built an interactive **React UI** with ID-based search and secure endpoints for efficient management.

Hotel Reservation System

Technologies Utilized: Python, MySQL, JDBC.

- Expanded a **hotel reservation system** integrating MySQL for seamless data handling.
- Applied **CRUD functionalities** for customers, rooms, bookings, and payments.
- Improved system reliability and data integrity through **transaction management and exception handling**.

Drug Recommendation System

Technologies Utilized: React.js, Node.js, Exprees.js, MongoDB, Python, SVC Algorithm.

- Created a responsive web application capable of **predicting diseases** based on user-provided symptoms and offering personalized recommendations, including medications, precautions, diets, and workouts.
- Designed an advanced **SVC machine learning** model to thoroughly analyze user inputs, ensuring accurate and reliable disease predictions for an enhanced user experience.
- Enhanced the platform with **user authentication, interactive symptom input, and PDF** report export functionality.

CERTIFICATES

- Completed **TCS iON Digital Hub – Advanced Communication Skills**, enhancing professional clarity, conciseness, and documentation proficiency.
- Earned **Online Certifications in HTML, CSS, and SQL** from **Great Learning**, strengthening web development and database fundamentals.

ACHIEVEMENTS

- Achieved 3★ rating in SQL on HackerRank, demonstrating strong database querying and problem-solving skills.
- Successfully completed NPTEL Course – Introduction to Internet of Things with 69%, gaining foundational knowledge of IoT concepts and applications.
