Address

Khandagiri, Bhubaneswer

Education

2023

Completed B.Tech In Computer Science and Engineering .

BPUT , Odisha

2019

Completed Intermediate

CHSE , Odisha

Certification

- Completed the NPTEL program certified by IIT-Madras on "Python for Data Science."
- Completed a one-month IBM internship and obtained certification as a "Python for Data Analyst".
- Certified Gold for the "Full Stack Data Science and AI Program" under the Ministry of Electronics and Information Technology, Government of India.

Language

English

Odia

Manamohan Mahanta

Nasccom Certified Data Scientist

Secured top 5% in Kaggle competition

Summary :

I chose the field of data science because I'm a well-organized person. I find it interesting to do things like using online analysis tools to uncover a use for the information. Not only is it interesting to me, but I also think my work benefits other people, as well.

Responsibilities :

- Developed predictive models by implementing Machine Learning and Probabilistic Algorithms and combined models through ensemble modeling to solve complex business problems.
- Analyzing large amounts of information to find patterns and solutions.
- Develop and maintain robust data preprocessing pipelines and reproducible modeling pipelines.
- Present information using data visualization techniques.

Experience :

- Knowing 15+ real-time projects in Data Science.
- 15+ Algorithm in AI & ML...

Skills set :

Data Science | Data Analytics | Artificial Intelligence | Machine Learning | Deep Learning | Computer Vision | Python | Statistical Modeling | SQL | Exploratory Data Analysis (EDA) | Data Cleaning | Data wrangling | Data Mining | Data Visualization | Neural Networks | Mathematics | Natural Language Processing | Deep Learning | ML pipeline | Optimization | Deployment

Tools :

Anaconda | Jupyter | Spyder | Tableau | MySQL | Numpy | Pandas | Scipy | Statsmodels | Matplotlib | Seaborn | Sklearn | XGBoost | Tensorflow | Keras | Nltk | OpenCV | Flask

Projects:

Mutual Fund Analyst [<https://github.com/manamohan7326/Mutual-Fund-Analysis>]

- Conduct thorough analysis based on client requirements to identify the most suitable mutual funds. Utilize advanced data collection techniques to gather relevant financial data from various sources.
- Employ Python and Pandas for data manipulation and analysis, ensuring accuracy and efficiency.
- Create visually appealing dashboards in Excel to present key performance indicators and aid in decision-making.
- Perform risk-return analysis, evaluating fund performance metrics and presenting findings to clients.
- Collaborate with the investment team to assess market trends and align fund recommendations with client goals.

Bank churn prediction[<https://github.com/manamohan7326/Bank-Churn-Prediction>]

- Developed and implemented a Bank Churn Prediction model using **CRISP-DM** methodology.
- Conducted Exploratory Data Analysis (EDA) to understand data patterns and trends.
- Applied advanced feature engineering techniques to enhance model performance.
- Utilized Python, Numpy, Pandas, Matplotlib, and Seaborn for data manipulation and visualization.
- Implemented various machine learning algorithms including SMOTED Tech., Decision Tree classifier, Ada boosting, Gradient boosting, and XGBoost.
- Collaborated with cross-functional teams to understand business requirements and align predictive retention strategies.

Email spam detection[<https://github.com/manamohan7326/Email-Spam-Detection>]

- Designed and implemented an advanced Email Spam Detection system for the Education sector.
- Using Python for algorithm development and data manipulation.
- Based on regular expressions for pattern matching and extraction.
- Using the NLP Technique for implemented lemmatization and stemming to enhance the context.
- Applied vectorization methods to convert textual data into a format suitable for machine learning.
- Implemented machine learning algorithms like Scikit-learn (Sklearn) for classification tasks.
- Naive Bayes Classifier developed and implemented for accurate email classification.
- Support Vector Machine (SVM) to be utilized to enhance the system's accuracy, particularly in handling non-linear relationships within the data.
- This project not only showcases technical proficiency in data science and machine learning but also demonstrates the ability to address practical challenges within a specific domain.
- The Email Spam Detection system developed stands as a testament to the application of advanced algorithms and techniques in solving real-world problems.
