### PROJECT

#### • Using HTML/CSS and JavaScript

- Sports Shop Homepage

Project Description: Sports Shop Website

This project involves creating a sports shop website using HTML, CSS, and JavaScript. The website will serve as an online platform for a sports, allowing customers to browse services, buy sports equipments, and learn more about the sport shop.

The key features and components of the website are as follows:

- Homepage:
  - The homepage will introduce the shop, featuring attractive images and a brief description.
  - It will include a navigation bar to access different sections of the website.
  - The homepage may also display any ongoing promotions or special offers.
- Services:
  - This section will provide detailed information about the various services offered by the shop.
  - Each service will have a description, price of the product.
  - Customers can select the item and proceed to the buying page

#### • Using J2EE, MySQL and Hibernate

Employee Management System

- HTML structure is for the various pages of Employee management system, such as the login page, dashboard, employee information page, attendance page, etc..
- Created servlets to handle HTTP requests and responses from the frontend or from the client side.
- Developed backend logic to handle various functionalities like adding, updating, and deleting employee records, managing attendance, generating reports, etc.
