PROFILE

Looking forward to find a responsible and challenging position in an innovative organization, where i can utilize my skills and knowledge which would enable me a fresh graduate to grow and excel along with the company by learning new technologies and contribute positively to the growth of the organization as well as my personal growth.

PROJECTS

- **Using HTML/CSS and JavaScript**
- **Saloon Homepage**

This project involves creating a salon website using HTML, CSS, and JavaScript. The website will serve as an online platform for a salon, allowing customers to browse services, book appointments, and learn more about the salon.

The key features and components of the website are as follows:

- Homepage:
 - The homepage will introduce the salon, featuring attractive images and a brief description.
 - It will include a navigation bar to access different sections of the website.
 - The homepage may also display any ongoing promotions or special offers.
- Services:
 - This section will provide detailed information about the various services offered by the salon.
 - Each service will have a description, price, and duration.
 - Customers can select a service and proceed to the booking page.

- **Spotify Application Cloning**

This project involves creating a web application that resembles the popular music streaming service, Spotify. The application will be built using HTML, CSS, and JavaScript, and it will provide users with a similar user interface and functionalities found in Spotify. The key features and components of the website are as follows:

Homepage:

The homepage will resemble the Spotify homepage, featuring a prominent logo, search bar, and navigation menu. It may also include sections for popular playlists, featured artists, or new releases.

LANGUAGES

- ENGLISH
- HINDI
- ODIA

DECLARATION

I do hereby declare that the above information is correct and true to the best of my knowledge and belief.

Monalisa Rout

- **Using J2EE, MySQL and Hibernate**

- **School Management System**

- *HTML structure is for the various pages of school management system, such as the login page, dashboard, student information page, attendance page, etc..*
- *Created servlets to handle HTTP requests and responses from the frontend or from the client side.*
- *Developed backend logic to handle various functionalities like adding, updating, and deleting student or teacher records, managing attendance, generating reports, etc.*

- **Login Validation and SignUp Form**

- *Used HTML to create the user interface and forms for signup and login. HTML tags and attributes will be used to structure the forms and gather user input.*
- *CSS properties has applied for the elements such as buttons, input fields, and containers to create an appealing user interface.*
- *Java 2 Platform, Enterprise Edition (J2EE) will serve as the development platform for the server-side processing. It provides a set of APIs and tools for building web applications.*

- **Using J2EE, MySQL, Hibernate and jsp**

- **Coin Less Laundry**

- *using jsp structure to write both java code and html code inside one page, to create the user interface and forms for signup and login. HTML tags and attributes will be used to structure the forms and gather user input.*
- *Created servlets to handle HTTP requests and responses from the frontend or from the client side.*
- *Developed backend logic to handle various functionalities like adding to cart, and feedback of customer, managing customer order*
