- Developed new, efficient, well-tested code for variety of different software projects.
- Worked closely with other team members to identify and remove software bugs.
- Provided weekly detailed report to keep Manager informed about milestones and project updates.
- Managed system testing and validation procedures to gauge reliability.

MY ROLES & RESPONSIBILITIES

In this application I have basically done the development and designing of the Admin app using Material UI and React.js. I have done all the API integrations of all the pages and tables. I have used firebase authentication for generating Admin and Super-admin token. I also have integrated the google map functionality as well as integrated functionalities to know every order status, rider’s position, rider’s status, customer details, customer queries etc.

In this application I have worked on every kind of modules such as login page, Reset password page, Request experts page, Full calendar functionality ,Chat with experts module, CSV download functionality, Trends and Trend details page functionalities etc.

In this fitness application I have used the React Ionic approach to Integrate Health kit to the iOS application, also integrated the Cricket and Event registration functionality in it’s Event Page. I also have published the application to Apple App store for an update.
