Work Experience

Octro - Software Engineer

October 2022 - Present

Data Pipelines:

- Performed data cleansing, preprocessing, and feature extraction, converted 100+ psql queries into mysql queries and 50+ redshift queries into greenplum queries and optimized queries for viewing data like DAU, MAU, Retention, Reactivation and many more.
- Designed and implemented scripts to store data in Elastic search, improving search and query speed and enabling bulk document insertion for optimization ,this data optimized fetching data time for frontend app from 15 minutes to 15 seconds.

Migration:

- Migrated 150+ tables and 10 procedures from MYSQL to Greenplum using different techniques like database import and scripts
- Migrated several redshift table to greenplum using python and php scripts along with a generic script for all type of databases which was further used by whole team.

Web Apps:

- Contributed to the frontend development of the company's tool Euler using HTML, CSS and prepared data for its chart representations using php and python backend.
- Managed frontend of data visualization tool CSM that was designed in React.js and JSX, handled data exploration, data storage using databases like mysql and greenplum . Developed frontend and backend APIs for the CSM tool using Python and Node.js.
- Developed 'Euler Access Control,' granting permissions for specific apps on another tool,which was used by admin to provide access.
- Worked on cash-admin-platform used for calling customers, viewing transaction on particular app of company, viewing full profile of user using different keys like its gameid. Improved the authorization flow of AWS lambdas by implementing IP address check in the flow.

Optimizations and R&D:

- Explored Singular data, compared it with Appsflyer data, and migrated consumers accordingly ,worked on many prewritten consumers.
- Integrated the PM2 process manager into the Sails.js app to create multiple instances, balancing the load on the Cash-admin-platform.

Python Scripts:

- Automated the process of reading data from hdfs and inserting it into the downstream greenplum database. Processed CSV data by extracting and sanitizing information before transferring it to multiple databases.
- Created a dynamic monitoring system with tools like Hdfs-greenplum-checker, Mysql-greenplum-checker, log-file-updation, and lag-checker. The team widely adopted it for handling table data discrepancies.

Additional Responsibilities:

- Developed pre-processed data warehouse to enable faster querying on Visualization tools.
- Gave KT to 2 members of team and assisted them throughout their internship period.

Octro - Software Engineer Intern

August 2021 – September 2022

- Wrote several bash scripts for basic automation tasks.
- Participation in enhancing existing projects involved optimizing their code-base.
- Optimized greenplum by setting it configurations and analyzed it for running bulky queries.

Skills

Familiar: Python, Javascript, HTML, CSS, PHP, MySQL, Greenplum, Elastic Search, HBase, Hadoop, Kafka, Redash, Gitlab, Zeppelin, Kibana, Data-hub, Airflow, React.js, Sails.js, Git, Gitlab,AWS Lambda.

Coursework: Data Structure & Algorithm, Object Oriented Programming, DBMS, Operating System.

Education

GL Bajaj Group of Institutions, Mathura

2018 - 2022

Bachelor of Technology in Computer Science, CGPA: 8.3 (Greater Noida, Uttar Pradesh, India)

Senior Secondary - Jagran Public School

2018

Higher Secondary (Science), Percentage: 74.8% (Kannauj, India)
