8598862842 | purnenduse3@gmail.com | <https://github.com/PurnenduSenapati>

Professional Summary

Results-driven Full-Stack Developer with **3.3 years** of experience in building **scalable, high-performance** web applications using the **MERN stack (MongoDB, Express.js, React.js, Node.js)**. Proficient in developing **responsive UIs** with React.js, state management with Redux, and styling using **Tailwind CSS and Bootstrap**. Experienced in designing **RESTful APIs**, handling **MongoDB databases** with Mongoose, and ensuring seamless frontend-backend integration. Skilled in optimizing performance, implementing authentication (JWT), and working in **Agile environments**. Passionate about leveraging AI tools to enhance UI/UX, automate workflows, and drive innovation through emerging technologies.

Technical Skills

- **Languages:** JavaScript, HTML5, CSS3, Node.js
- **Frameworks & Libraries:** React JS, Redux js, Redux Toolkit, React Router, Express js, Tailwind, Bootstrap
- **Databases:** MySQL, MongoDB
- **Version Control:** Git, GitHub
- **API:** RESTful APIs, SOAP API, JSON
- **Tools:** Visual Studio, IntelliJ, MySQL Workbench
- **Others:** Data Structure and Algorithm, Design Patterns, System Design

Professional Experience

Deeporion Technologies Pvt. Ltd.
Your Shopping Hub

Jan 2022 - Present

Roles and Responsibilities

Software Development:

- *Developing Responsive User Interfaces* – Designed and built responsive and user-friendly interfaces for the shopping application's cart functionality and login page using React, HTML, CSS, and JavaScript, ensuring a seamless experience across devices.
- *State Management Performance Optimization* – Implemented Redux for efficient state management, enabling real-time updates within the cart and authentication flows. Optimized performance using lazy loading, memoization, and code-splitting techniques.
- *Reusable Scalable Components* – Developed modular and reusable UI components to enhance maintainability, scalability, and performance across the application.
- *Backend Development* – Built and maintained simple server-side logic using Node.js to handle data requests, ensuring smooth communication between frontend and backend.
- *Database Management* – Used MongoDB (with Mongoose) to store and manage data, keeping the application efficient and organized.
- *API Integration* – Connected frontend with backend by integrating RESTful APIs to fetch product data, update carts, and handle user authentication.
- *Debugging Collaboration* – Worked closely with backend developers and designers to deliver production-ready features. Used tools like Chrome DevTools and Postman to test and fix issues.

- *Version Control Best Practices* – Used Git and GitHub for version control, ensuring clean and efficient code. Followed best practices in both frontend and backend development.

Project Highlights

React js Developer | Dealshare - Shopping Application

Dec 2021 – Present

Duration: 3.1 years

- *Designed Developed a Responsive UI* – Built a dynamic, responsive shopping application using React.js, ensuring a seamless user experience across devices.
- *State Management Performance Optimization* – Implemented Redux for efficient state management, optimizing data flow and ensuring smooth application performance.
- *Reusable Scalable Components* – Developed modular and reusable UI components using React.js and TypeScript, enhancing maintainability and scalability.
- *Cart Functionality with Real-Time Updates* – Designed and implemented cart operations, enabling users to add, remove, and modify products dynamically.
- *Authentication User Management* – Developed a secure login and registration system with form validation, session management, and JWT-based authentication.
- *Navigation Routing* – Implemented React Router for seamless navigation between product listings, cart, and checkout pages.
- *UI Styling* – Utilized Tailwind CSS and Bootstrap to create a visually appealing, mobile-friendly, and accessible interface.
- *Payment Gateway Integration* – Integrated payment gateway APIs to facilitate secure and seamless online transactions for customers.
- *Performance Optimization* – Improved application speed using lazy loading, memoization, and code-splitting techniques.
- *Testing Debugging* – Conducted rigorous testing using Jest and React Testing Library while debugging with React DevTools and browser profiling tools.
- *Server-Side Logic API Development* – Built and maintained backend functionality using Node.js, handling API requests for product listings, authentication, and orders.
- *Database Management* – Used MongoDB (with Mongoose) to store and manage product, user, and order data efficiently.
- *Authentication Security* – Implemented JWT-based authentication and role-based access control to ensure secure user sessions.
- *API Integration Data Handling* – Developed RESTful APIs to fetch product listings, manage orders, and update cart data, ensuring smooth communication between frontend and backend.
- *Error Handling Debugging* – Implemented server-side validation, logging, and error-handling mechanisms for a more reliable and robust application.
