

For the sso -

Requirement - When user click on virtualcafe Tour on flexmls product page it should redirect to own dashboard in <https://virtualtourcafe.com> with user id.

Facing Issue - When I access https://virtualtourcafe.com/sso/flexmls_login.php file. It is redirect to signup form because it is not get any data from the database. The main concern is with is **SimpleSaml SP API**.

When I am going to access simpleSaml api installation page. <https://virtualtourcafe.com/sp2/www/> Its is showing the below error.

I am sure it is the problem of simpleSaml Sp Api because when I am going to fetch data from api its is showing nothing about user information and ID in the array but it is authenticated. Please see screen shot.
