PROJECTS

ECA

Email campaign application software that will enhance the performance and email productivity of your team. can automate your email campaigns, send personalized emails, schedule follow-ups, track unlimited emails for free for a lifetime and many more. It also provides insights on your email opens, link click tracking and integration with hundreds of powerful apps, allowing you to streamline your process. In addition, you get email templates that can be customized and reuse time and again.

As a part of advanced email campaign software, it also has a feature of advanced email analytic. It can analyze the results of your emails, check the average open and reply rates, and even monitor the effectiveness of your email templates. You can track unlimited email opens, link clicks, get read receipts, instant desktop email open notifications. And the best thing is the recipient will be unaware of all these tracking activities. The Email Scheduling feature, allows you to schedule your emails according to different time zone and send your emails according to your convenience. Using this can create and save custom templates for effective email campaigns. The templates can be shared among the team for excellent productivity and each template's performance report is generated to analyze which template provides the best result
