Summary

Innovative and seasoned software engineer with 1 year of experience with Python, Java and Data Engineering with Azure Databricks and Snowflake Database. Skilled in building scalable data pipelines, deploying machine learning models, and developing robust backend systems. My passion for Technology and Innovation drives me to produce profitable outcomes for my company.

Work Experience:

VUCS Private Limited

Kolkata, West Bengal

Software Engineer

JAN 2024 - PRESENT

- Developed Stored Procedures for Data Migration:** Spearheaded the development of stored procedures for a large data migration project with a leading Singaporean telecom company on Snowflake Database, ensuring accurate historical tracking through SCD2 logic and reducing load times by 30%.
- Reverse Engineering Software Development:** Developed, optimized software parsing **5,000+** Informatica PowerCenter XML configurations, accelerated reverse engineering by **130% overall** and improved error detection accuracy by **40% average**.
- Cloud-Based Data Pipeline Implementation:** Designed, built, and optimized a cloud-native data pipeline with Apache Airflow, Azure Blob Storage, Databricks, and Data Factory, boosting ETL efficiency by **60%**, enhancing data availability, and increasing system reliability for **5** BI teams.
- Backend Development for E-commerce Platform:** Contributed significantly to the development of a scalable backend for a multi-vendor e-commerce application using Django, integrating Azure DevOps services to boost scalability and reliability. Achieved a **40% improvement in response time**, handled **100+ concurrent vendor requests**, and scaled to support **over 10,000 product listings** efficiently.
- API Development for Vehicle Registration Software:** Developed and deployed a secure and robust API with Python Fast API, processing **10,000+ daily requests** while enhancing security protocols to be **99.9% hack-proof**, optimizing reliability and scalability by **50%**.

Projects:

- Face Recognition using Entropy from Video:** Developed a high-accuracy face recognition model using entropy-based features on two widely recognized video datasets **300VW_Dataset_2015_12_14** and **YouTube Faces DB**, achieving 97% prediction accuracy with advanced classification algorithms, effectively distinguishing individuals with high precision.
- Containerized Microservice Application Development with AWS:** Completed successful implementation of a microservice application for student festival registration at RCCIIT, utilizing AWS, Docker, Kubernetes, and Spring Boot. Managed and streamlined the registration process at RCCIIT's 2023 festival, enhancing user experience and demonstrating proficiency.

Education

2022 - 24	Master of Computer Application RCC Institute of Information Technology (CGPA – 8.45)
2018 - 21	B. Sc Mathematics Honours Raiganj University (CGPA – 8.05)

Programming Languages:

Python, Java, JavaScript, SQL, PL/SQL, C, C++

Certifications:

Azure Databricks & Spark for data Engineers (**Udemy**), Machine Learning with Python (**Udemy**), Oracle DBA with basics of AWS (**VUCS**)

Technical Skills:

- Data engineering with Snowflake Database, Azure Databricks, Azure Data factory, Apache Spark & Airflow, MySQL, PostgreSQL, Oracle
- Backend development with Django, Fast API, Node JS, Spring Boot
- Machine Learning with Python (Scikit-learn)
- Creating interacting dashboard using Microsoft Power BI,
- DevOps with Docker, Kubernetes, Git & GitHub, Azure Container Instance

Languages: English (Business Fluent), Hindi (Business Fluent), Bengali (native)
