SKILLS

JavaScript	React
HTML	CSS
Redux Toolkit	React Query
Tailwind CSS	Node JS
Express	MongoDB
TS	

INTERESTS

Photography	Coocking
Coding	Traveling
Ridding	

Passionate and skilled MERN stack developer with one years of experience in building and maintaining web applications. Proficient in MongoDB, Express.js, React.js, and Node.js, with a strong understanding of JavaScript, RESTful APIs, and responsive design principles

EDUCATION

Dr._A.P.J. Abdul Kalam Technical University (August 16, 2018 - May 19, 2022)
B.Tech, Computer Science 6.9
https://aktu.ac.in/

WORK EXPERIENCE

WTechy Private Limited (February 01, 2024 - Present)
Full Stack Developer

- Manage website development projects from initial design through completion, optimizing all cross-browser and multi-platform compatibility.
- Work closely with programmers and clients to meet project requirements, goals, and desired functionality. I have been working at WTechy Private Limited as a MERN Stack developer. During my tenure, I have been involved in various projects, including the development and maintenance of a CRM system. My responsibilities have encompassed the fullstack development process, from designing and implementing the backend using Node.js and Express, to building responsive user interfaces with React. Additionally, I have utilized MongoDB for database management and employed various tools and technologies to ensure the scalability and efficiency of the applications. My experience at Webwheel.in has honed my skills in the MERN stack and allowed me to contribute significantly to the company's software solutions.

PROJECTS

CRM Project (IMS) (February 18, 2024 - Present)
Full Stack Web Application using mern stack tech

Hello I am really excited to share this project with you I have created this application using MERN Stack tech. This Project is totally based on the Institute Management Web application. where Admin can add other users like they have Admin, Super Admin, Counsellor and other role as well. where admin and super admin edit or add and delete them also. In this application has many features like Add Student and mange their fees and send the remainder when get due. then it will send the remainder to the student also to pay fees on time. it will send the before the due date got expired. or we can also add course where admin or super admin can add or delete or update them. or you can add subjects of the course according to semester or category wise, there other feature you can add annual or semester wise. or other feature is you can student subject marks also. then we print the student result also. or I have added one feature as well where we pay student fees then it can also send the mail to the student or admin also. this application has full features like IMS application have. I have learned a lot from this project thanks for them they provide me chance worked like this project. I always want to learn something in my life. that's all about this project.

Expense Tracker App
Web Application in React Js and backend Firebase Service

Developed a dynamic website expense tracker from scratch using HTML, CSS, JavaScript, Material UI, and React. Implemented an intuitive interface allowing users to effortlessly add, edit, and delete expenses, resulting in improved efficiency and productivity. Successfully incorporated premium subscription feature enabling users to download their expenses and activate a dark mode, enhancing user experience and satisfaction. Designed a visually appealing and modern website with a clean layout, ensuring an aesthetically pleasing and seamless experience for users. Demonstrated expertise in web development and showcased ability to create practical and user-friendly tools.

Mail Box Application
Full Stack Web Application using mern stack tech

Developed a high-performing Mailbox client website using HTML, CSS, JavaScript, Material UI, and React, resulting in a functional clone of Gmail with impressive features including email sending, receiving, and deletion capabilities. Implemented a robust email management system that accurately counts and tracks unread emails, enhancing user experience and productivity. Created a visually stunning design interface that captivates users, resulting in an aesthetically pleasing email experience. Streamlined the website's navigation, ensuring easy and intuitive access to email accounts, enhancing efficiency in email management for users. Successfully replicated the seamless and user-friendly email experience of Gmail, providing users with an efficient and reliable platform to manage their emails.

Netflix Movies
Full Stack Web Application

Developed a Netflix Movies clone in React Js, allowing users to login and signup with email and password. Implemented a movie hero section with a play button, enabling users to directly play the current movie. Loaded 80's movies at a time, allowing users to slide through them by clicking arrow buttons. Implemented a logout functionality for user convenience. Utilized Vite to build the React app, resulting in faster development compared to CRA. Utilized Firebase as a backend as a service. Implemented state management using Redux Js toolkit. Designed the user interface using styled components and React icons. Integrated the TMDB API to fetch data for the movies. Successfully completed the project, showcasing proficiency in React Js, state management, API integration, and UI design.
