| Data Engineer

PROFESSIONAL SUMMARY

- **Almost 3.5years** Of experience in **Spark Ecosystem**, design/developing applications and designing, developing and maintaining large business applications such as data analytics, datamigration, integration and Testing.
- Domain experience includes **Manufacturing**.
- Exposure in design and development of solutions for Big Data using the Hadoop eco system technologies (**Python, Java, HDFS, Hive, Sqoop, Apache Spark, AWS, Azure, Pyspark, Snowflake**)
- Worked extensively on Data migration project and POCs.
- Capable of processing large sets of **Structured, Semi-structured** and **Streaming data**
- Brought in simplification process and **Optimization** initiatives to bring efficiency into applications.
- Able to assess business rules, collaborate with stakeholders and perform source-to-target **data mapping**, design, and review
- Worked on Azure Components like **Azure Data Factory(ADF), ADLS, Azure Synapse, Logic Apps, Azure Databricks, Azure spark pool**.
- Worked on AWS Components like **S3**.
- Worked on Snowflake by using **Snowpipe** and other mechanism.
- Handled multiple reads and writes with **Azure Data Lake and Blob storage**.
- Strong data base experience in **MS SQL Server, Azure Synapse Dedicated SQL Pool, Snowflake**.
- Worked in **Agile Methodologies**.
- Deep knowledge in incremental imports, **partitioning** and **bucketing** concepts in Hive and Spark SQL needed for optimization.
- Experience collecting log data from various sources and integrating it into existing environments.
- Designed and developed logical and physical data models that utilize concepts such as Star Schema, Snowflake Schema and **Slowly Changing Dimensions**.
- Create and maintain **ETL** specifications and process documentation to produce the required data deliverables (data profiling, source to target, ETL flows)
- Have good problem solving and **analytical** skills and love to innovate in order to perform better.
- Have strong Interpersonal skills, communication skills and people skills to manage a team.

SKILLS

Programming language- Python, Pyspark, SQL, Snowflake, DBT, Airflow

Tools & Software – PySpark, Databricks, Snowflake, Azure Tech Stack – Azure ADF, ADLS, Storage Explorer, Blob Storage, Azure SQL database, Logic Apps, Azure functions, Azure Devops, Power BI.

Skills & Techniques – Requirement Gathering, Analytical Problem Solving, Data Engineering, Data Quality, Automation, Machine Learning.

EXPERIENCE

People Tech Pvt. Ltd. | Data Engineer

Dec-2020 | Hyderabad

- Performed **Import and Export** of raw data to **ADLS**
- Developed **spark** code using Azure Databricks and Notebook.
- Managed an on-site team of engineers who worked **on agile model** across different components of Project. Also involved in requirement gathering and coordination with clients.
- Analyzed, designed, and built **Modern data solutions** using Azure PaaS services to support visualization of data (**Power BI**).
- Extract Transform and Load data from **SQL server** to Azure Data Storage services using Azure Synapse Analytics and processed it with Azure notebook using pyspark code.

- Created and improved data **integration pipelines** and metric processing by decreasing run time by 25%
- Migrated SQL Stored Procedures to Azure Databricks using **Pyspark and Spark-Sql**. also responsible for **Optimizing Spark sql** queries that helped in saving Cost to the project.
- **Loaded and transformed** large sets of semi structured data likes **XML, Json**.
- Involved **in handling team** for a soften project delivery.
- Understand and execute **Change and Incident management**.
- Developed **Python** code to fetch data from various sources.
- Utilized Snowflake **Snowpipe** for ETL processes and loading into Snowflake database.
- Implemented Snowflake functions for triggering mechanisms.

PROJECT

- **Project name -ESSEX**
- **Details:** The ESSEX project is related to property management and originally utilized Python with data stored in Azure Data Lake Storage (ADLS). However, it has transitioned to Snowflake for improved data management and analytics capabilities. The Snowpipe methodology is now employed for the ETL (Extract, Transform, Load) process, with data being stored directly in the Snowflake database once available. To automate the process, trigger mechanisms have been implemented within Snowflake. These triggers are configured to check for new files every 12 hours. If any new files are found, the triggers initiate the ETL process; otherwise, they remain idle until the next check.
- **Project Name- Snowflake POC(Internal)**
- **Details:** The Snowflake POC (Proof of Concept) project is an internal initiative where the client provides 48 JSON files daily at a specific time. Leveraging Snowflake, Spark code has been developed to handle these nested JSON files effectively. The process involves fetching the files from blob storage, processing, and cleaning the data using Spark, and then loading the processed data into Snowflake storage tables. Finally, the Power BI team accesses this data directly from Snowflake to generate insightful reports for analysis and decision-making purposes.

EDUCATION

Biju Pattnaik University | Bachelors in Computer Engineering

2016-2020

Additional Courses: Machine Learning

Additional Certifications:

- **DP-203: Data Engineering on Microsoft Azure**
- **AWS Beginner Level**

Declaration:-

I, Sidhanta Panda do solemnly declare that the facts provided above are true and genuine to the best of my knowledge and belief.

Place: Hyderabad

Date:
