Profile Summary

A **Full Stack Developer** with more than 2 years of industry experience, skilled in both frontend and backend development. Proficient in **HTML**, **CSS**, **JavaScript**, and **React.js** to create responsive, adaptive web designs that perform optimally across devices and browsers, ensuring seamless user experiences. Backend expertise includes **Node.js**, **Express.js**, and **MongoDB**, focusing on scalable and secure server-side applications with high performance. Experienced with the **MERN stack**, and integrating **RESTful APIs**, while using Postman for effective testing and debugging, ensuring robust and error-free applications. With **AWS** cloud experience, deployed applications that are both reliable and scalable, reducing manual processes by 40% and optimizing resource usage. Knowledgeable in **UI/UX** design principles, creating intuitive and user-friendly interfaces. Familiar with **Software Development Life Cycle (SDLC)** and **Agile methodologies**, contributing to streamlined project delivery and continuous improvement. Committed to security best practices, resulting in a 50% reduction in potential risks. Moreover, I bring strong communication skills, both written and verbal, which are crucial for effective collaboration and knowledge sharing within development teams.

Skills

Tools: Postman, Bootstrap

Database: MySQL, MongoDB

Scripting Language: HTML, CSS, JavaScript, ReactJS

Programming Languages: Core Java, REST API

IDE: Eclipse, Visual Studio Code, STS

Cloud: AWS

Version Control: Git, GitHub

Full Stack Frameworks: MERN (MongoDB, Express.js, React.js, Node.js)

Work Experience

07/2022 — 10/2024 Software Developer
Live Digital Technologies Pvt. Ltd

Project

Project # 1

Project Name: Weighbridge Management System

Client Name: Vikram Private Limited

Role: Front End Developer

Technology: ReactJS, Spring Boot

Version Control Tools: - GIT, GitHub

Project Description:

The Weighbridge Management System is a software application engineered to automate and streamline the vehicle weighing process, ensuring accuracy, efficiency, and security, managing more than 100 daily transactions. This system is essential for industries such as logistics, manufacturing, mining, and agriculture, where accurate weight measurements are crucial for inventory management, billing, and compliance with regulations.

Roles and Responsibilities:

- Developed and applied responsive and interactive UIs using HTML, CSS, and JavaScript, improving user engagement by 30%.

- Maintained adherence to established coding guidelines, including version control and code reviews, ensuring 95% code quality compliance.
- Tested and fixed issues across multiple browsers and resolved numerous UI inconsistencies.
- Worked in an Agile Development Environment with frequently changing requirements and features, reducing paperwork by 40% and increasing efficiency by 50%.
- Handled state and behavior using ReactJS frameworks/libraries, reducing 25% loading time.
- Teamed up with backend developers, ensuring a smoother data flow by 25%.
- Participated in more than 10 Test Process Improvement discussions to enhance the Testing process.
- Engaged with product managers and QA engineers in Agile processes, resolving over 50 issues.

Project # 2

Project Name: ContGen

Client Name: LD Tech

Role: Full Stack Developer

Technology: ReactJS, NodeJS, MongoDB

Version Control Tools: - GIT, GitHub

Project Description:

The ContGen is a web application designed to utilize the OpenAI API for generating responses. Users can interact with the application to receive responses tailored to their queries, which can then be downloaded in a PDF format. This system ensures efficient and accurate content generation, making it valuable for various applications where quick and reliable information is needed.

Roles and Responsibilities:

- Structured and implemented responsive and interactive UI using HTML, CSS, JavaScript, and React.
- Developed and maintained RESTful APIs using Node.js and Express, ensuring efficient and secure data flow between frontend and backend, achieving a 30% reduction in response time.
- Followed coding standards and best practices, including code reviews and version control.
- Tested and debugged applications in more than 5 browsers and at least 3 devices to ensure cross-browser compatibility and optimal performance.
- Operated within an Agile development environment, adapting to regularly changing requirements and features, leading to a 40% increase in delivery speed.
- Managed state using ReactJS frameworks/libraries, optimizing rendering performance by 20%.
- Cooperated closely with backend developers to ensure the best integration and data flow between frontend and backend services.
- Optimized DB queries, reducing execution time by 20% through schema enhancements and indexing.
- Engaged in discussions to refine and optimize the testing process improving efficiency and effectiveness.
- Collaborated with QA engineers and product managers in Agile sprints to resolve 50+ application issues.

Education

BTech – Electronics and Communication Engineering (ECE): **2019-2023**

Silicon Institute of Technology – Bhubaneswar, Odisha

Certification

Completed 3 months of DevOps Training conducted by LD Tech during the year 2023
