Address: Bhubaneswar, Odisha

Professional Summary

Highly skilled Backend Developer with over 2 years of experience specializing in creating secure, scalable, and efficient web applications. Proficient in Python and backend frameworks like Django, FastAPI, and Flask. Experienced in building RESTful APIs, integrating React frontends, and optimizing MySQL and MongoDB databases. Known for delivering reliable solutions that enhance data accessibility and user satisfaction. Passionate about continuous learning and committed to delivering client-centered, high-quality software solutions.

Technical Skills

- **Programming Languages:** Python, JavaScript
 - **Backend Frameworks:** Django, FastAPI, Flask
 - **Frontend Technologies:** HTML, CSS, ReactJS
 - **Database Management:** MySQL, MongoDB, Database Schema Design
 - **API Development:** RESTful API
 - **Cloud & DevOps:** AWS (EC2, S3), Git
 - **Other:** Unit Testing, Agile/Scrum
-

Experience:

Company Name: Swostitech Solutions pvt.ltd, (Bhubaneswar)

Designation: Junior Software Developer

Duration: February 2023 to Till Now

Professional Experience

- Developed high-performance backend systems using Django, improved response times and supporting rapid data retrieval.
- Designed and optimized REST APIs for seamless data exchange with ReactJS frontends, contributing to enhanced user experience and engagement.
- Implemented data caching techniques, reducing API latency
- Architected and maintained database schemas for MySQL and MongoDB, optimizing query performance and minimizing redundancy.
- Collaborated with cross-functional teams for full-cycle development.
- Developed unit tests and participated in code reviews and improvement in bug detection.

Project Handled #1:

Project Name : Acadix (Education Management System)

Technologies : Python, Django, ReactJS, MySQL

Role : Backend Developer

Description: Developed a school management system enabling administrators, teachers, and students to manage daily activities.

Responsibilities:

- ☐ Developed robust, scalable backend solutions for student registration, fee management, Transport management and library modules using Python, Django improving overall system performance and data accuracy.
- ☐ Implemented role-based access control to secure sensitive student, staff, and administrative data, enhancing data privacy and regulatory compliance.
- ☐ Created RESTful APIs for comprehensive functionality including student registration, attendance, fee payments, and staff scheduling, ensuring efficient, secure, and reliable data flow between frontend and backend.
- ☐ Automated critical notifications and alerts for fee dues, library returns, and attendance status via integrated SMS/email services, significantly improving communication with students and parents.
- ☐ Enhanced code quality and system reliability by implementing unit and integration tests, achieving reduction in post-deployment issues and maintaining a high-performance application.

Project Handled #2:

Project Name : Oblate Management System

Role : Backend Developer

Technologies : Python, Django, ReactJS, MySQL.

Description: Built a system for managing member profiles, event schedules, and internal communications.

Responsibilities:

- ☐ Designed and developed a term-based member management system for oblate members, enabling efficient tracking and management of membership periods, dues, and activities, resulting in improved member engagement and retention.

- Implemented monthly instalment tracking for oblate member dues, with automated calculations and notifications for upcoming and overdue payments, improving payment compliance.
- Built a secure messaging and communication module for direct SMS notifications on new events, dues, and reminders, streamlining communication and enhancing member involvement in community activities.
- Created automated SMS alerts for important updates, including event announcements, payment reminders, and due notices, ensuring timely communication and reducing manual workload for administrators.
- Developed a robust backend system using Django and MySQL to manage oblate records, track financials, and generate monthly and term-wise reports, providing valuable insights to administration.
- Enhanced data accessibility and accuracy by designing an optimized database schema, reducing data retrieval time and enabling seamless tracking of member statuses, instalment history, and term details.

Education Qualification:

Master of Computer Application
College of IT & Management Education Bhubaneswar
Aug 2019 – June 2021

Bachelor of Computer Application
S.V.M Autonomous College
May 2016 – June 2019
