

Subham kumar das

Angular | ReactJs Developer - 3+ YOE
subhamkvgms112@gmail.com | +91 9777505681 | [linkedin/subham](https://www.linkedin.com/in/subham) | Visakhapatnam

EDUCATION

B.Tech Computer Science Engineering Specialization

Parlakhemundi, India | Jun 2020 Cutm

WORK EXPERIENCE

Miracle Software system | Junior Technical Associate

Visakhapatnam, India | Aug 2021 - present

- **Developed** responsive web pages to ensure optimal user experiences across various devices.
- **Implemented** industry best practices and prioritized security considerations throughout the development process.
- **Employed a modular approach by reusing components and hooks**, enhancing code **maintainability** and **reusability**.
- **Optimized** codebase for improved **performance**, utilizing techniques like **lazy loading** to enhance web page **speed** and **scalability**.
- **Utilized state management libraries** like **Redux** to enhance the **user interface** and maintain a **seamless user experience**.
- **Collaborated closely with product owners, UX teams, and backend developers** to **comprehend feature requirements** and ensure effective communication across teams.
- **Compiled and documented technical specifications** to maintain clear **communication** and **facilitate knowledge sharing** within the development team.
- **Engaged in delivering organization-wide training sessions**.

PROJECTS

Nafarm

Angular ,spring boot , Web API, SQL Server, AWS EC2

Pandora's primary objective is to build an internal application to replace the manual process of maintaining the ADS library in the Gitlab repository with a more structured process to help terminologists and users manage them easily.

Kpi application

ReactJS,Nodejs,mongodb,express js,

Kpi application allows customers to distribute resources, providing a software on subscription-based model as well as collect raw data employee based on matrix to process information for performing analytics, improve their applications and generate better results.

Amci

Angular ,spring boot , Web API, SQL Server, AWS EC2

AMCI Doppler is a scheduling application mainly that provides services in the US. The core objective of this project is to keep contactless and at-home services for end users. It is used at various automotive dealerships used by internal employees. We have Dispatchers (employees) in the dealerships that can create, update, and cancel appointments. These appointments can be for a test-drive appointment and/ or for a pick-up or a drop-off for a service appointment. The application has a Calendar view to show the appointments. The application has search functionality and filtering based on various criteria. The application also has PowerBI reports embedded into the application for reporting purposes.

SKILLS

Languages: JavaScript , TypeScript

Frameworks: Angular, ReactJS, Next.js

Libraries: RxJs , Redux , Tailwind CSS, Sass/Bootstrap

Version Control Systems: Git , Bitbucket

Code Quality Tools: ESLint, Prettier, TSLint
Other Technologies: Core Java, Spring Boot, REST API

Declaration:

I hereby declare that the above information is true to the best of my knowledge. **07/09/2024**
