EXPERIENCE

Swarnatech Lab, Ifotechsys Techlab World, Remote • Full Stack Developer

Dec 2020 – May 2023

As a Full Stack Developer and Graphic Designer, I contributed to the development of static and dynamic websites, including e-commerce platforms and ERPs across diverse domains. Specialized in crafting user-friendly interfaces, I played a key role in enhancing the overall user experience.

Techzex Software Private Ltd, BJB Nagar, Bhubaneswar – 751002 • Full Stack Developer

(May 2023) – Present

As a Full Stack Developer and Graphic Designer, I successfully developed static and dynamic websites, e-commerce platforms, and ERPs across diverse domains. Specialized in creating user-friendly interfaces, I incorporated payment integrations and email functionalities. Additionally, I contributed to the development of web-converted apps, showcasing adaptability and proficiency in a range of technologies.

EDUCATION AND CERTIFICATIONS

Bhubanananda Orissa School of Engineering, Cuttack • Diploma in Computer Science Engineering – (2018 – 2021)

Ajay Binay Institute of Technology, Cuttack • B.Tech in Computer Science Engineering – (2021 - 2024)

- *Achieved Silver Medal in the Field of Web Technology in Odisha Skills Competition in 2021*
- *Represented Odisha in Regional India Skills Competition in the field of Web Technology and won Silver Medal in 2021*
- *Represented Odisha in National India Skills Competition in the field of Web Technology in 2022*

PROJECTS DONE

Ecommerce Website – Mokhya, Techzex

- Created an E-commerce website called Mokhya, incorporating dynamic product display, an easy-to-use Add to Cart feature, a smooth checkout process, and user-friendly Sign-In and Sign-Up functionalities. Implemented an admin panel to efficiently manage all products and orders on the website. Integrated Razor pay Payment gateway for Online Payment
- Designed and developed Techzex, a website offering courses with flexible payment options. Users can add courses to their cart, choose installment plans for payment (either full amount or registration fee only), and complete transactions through an integrated online payment system powered by PhonePe Payment Gateway. Additionally, users have access to a personalized dashboard displaying ongoing and completed courses, with options to update passwords and download certificates. Developed an admin panel for seamless management of the entire website.

ERP Software – Saviorways and Admin Panels

- Created an MLM (Multi-Level Marketing) software enabling users to provide referrals directly or indirectly. The main user receives compensation along with individuals connected up to 21 levels deep within the network. With Documents Verification, Pin Requests Option, Wallet System and many more options.
- Creating an admin panel for a website involves designing and implementing a secure interface that allows authorized users to manage various aspects of the website's content, functionality, and settings. The admin panel serves as a centralized dashboard where users with the appropriate permissions can perform tasks such as adding, editing, or deleting content, managing user accounts, configuring site settings, and accessing analytics and reports.

Dynamic Website – [Utkals KIA, Little Genius Olympiad, Utkal Auto Coach, Utkal Auto and many more]

- I have created a dynamic website for KIA that allows users to browse vehicles categorized by type and subcategories. Additionally, users can make online bookings for vehicle purchases, vehicle exchanges, or any required services.
- For the Little Genius Olympiad, I've designed and developed a website that facilitates the registration process for schools by the admin. Once registered, schools can log in to register their students. The admin has the capability to generate certificates for students, including their marks and positions. Additionally, the admin can manage all website content.
- Both Utkal Auto Coach and Utkal Auto are dynamic websites featuring sections for teams, testimonials, auto parts, detailed information about auto parts, a career page, and an "Apply Now" section.

Static Websites – [Handle Exception, Meetmonk, YMCA, SharpDry, Ananya's Aryurveda]

- I've created numerous static websites tailored to clients' specific requirements and preferences.

Web Converted Apps – [MOR Services]

- I've developed a web-based application that functions as an online hotel booking service, catering to both hourly and day-wise bookings. Users can conveniently make hotel reservations, check their booking statuses, and cancel bookings as needed. Additionally, users earn rewards in the form of coins for their bookings. Furthermore, I've created an admin panel to efficiently manage all aspects of the booking system.
- I've developed an application specifically designed for hotels to streamline their operations. This application allows hotels to efficiently manage their rooms, view bookings, handle check-in and check-out processes for customers, cancel bookings when necessary, and generate comprehensive data reports for analysis.
