PROJECTS

PROJECT-1

ATS (Application Tracking System)

Dec 2021 - Apr 2022

ATS is an all-in-one human resource software that automates the hiring process, helps HR teams efficiently manage every part of recruitment (from job posting to on boarding) and solves recruiters challenges and pain points.

Roles and Responsibilities:

- In this Project I worked as UI Designer and UI Developer.
- There is two admins are HR manager and Recruiters. We make two modules for those based role type there are login to their modules.
- I developed screens by use Angular 14, Bootstrap. made responsive till desktop and laptop screens.

PROJECT- 2

Quick Heal - CRW App purchase - Super Admin

May 2022 - Apr 2023

In this project I worked as UI Developer. Quick heal CRW is Code Renewal. This is one window based project. The main goal of this project is to give anti-virus product as per user requirements in main three ways i.e., Total security, internal security and Antivirus pro. We are used Paytm payment for financial transactions.

The Main goal of this Super Admin project is to handle the Product's prices, duration etc by Super admin and other admins.

I worked as UI developer for this project. My team achieved client requirements

Roles and Responsibilities:

- I was done QR code renewal flow at certain time limit based java script.
- I developed the screens in java frame. Java frame does not accept the type of script so, we front end code done in IntelliJ used only Java script code based on requirements.
- I was done Develop and Integration in pages of login, dashboard, user module, product module, activity log modules.

- I developed screens and Integration in Angular with tailwindCSS.
- I was completed Login, super admin and other six admins integration.
- Translated UX wireframes in to user-friendly UI designs.
- I made UI designs with collaboration with clients.

PROJECT - 3

Quick Heal-Command Center

May 2023 - July 2023

The "Quick Heal Command Center" project involved creating a data visualization dashboard from scratch. This dashboard was designed to visualize various Quick Heal usage data, including location count, state count, industry count, and URL sources.

Roles and Responsibilities:

- Developed the application using Angular 14, HTML5, CSS3, and Tailwind CSS for a responsive design for desktop, laptop resolutions and 4k Monitors resolutions
- Designed and used reusable Angular components for code efficiency.
- Developed a custom toaster component to display alert messages, enhancing user understanding and feedback.
- Translated UX wireframes in to user-friendly UI designs.

PROJECT - 4

HMS-Hospital Management System

Aug 2023 - Sep 2023

The "HMS" project is main goal is to provide online management of all hospital related work. The tool developed for managing and maintaining the Hospital Management System. In this tool, we have implemented different kinds of users along with their role configurations like Patient, Doctor, Receptionist etc. and based on the role configurations navigating to different kinds of dashboards with respective functionality like treatments, appointments, slot management, treatment procedure tracking etc. and its mainly for fertility related services

Roles and Responsibilities:

- Developed the application using Angular 14, HTML5, CSS3, and Tailwind CSS for a responsive design for mobile and desktop, laptop resolutions.
- Maintain good quality of code and easy to understand other developers in future.
- Reusable components used for pagination, search and modal popup.
- Make customized toastr and common component like buttons, headers and sub titles.

PROJECT - 5
