

# Rama Krishna D.V.S

Dr NO: 3-26, Old Main Road,  
Devadi (Vill), Narasannapeta (MD),  
Srikakulam, Andhra Pradesh-532421.

dvsramakrishna1010@gmail.com  
Mobile No: +91 99858 63838

Aim to be associated with a Progressive organization where I will be a valuable team member, contributing quality ideas and work for an organization where there is an ample scope to grow for an individual as well as organization growth in Software Development.

## Relevant Experience

Highly experienced software engineer with **10+ years** of hands-on development experience, specializing in **Python-based backend systems**. Possess **5+ years** of deep expertise in **Python**, with strong proficiency in **Django (2+ years)**, **Flask (3+ years)**, and **FastAPI** in the current project for building high-performance, scalable RESTful APIs. Extensive experience in API design, authentication, data validation, and integration with frontend and third-party systems. Strong exposure to **Azure Cloud**, implementing automated **CI/CD** pipelines using Azure DevOps, ensuring reliable deployments, monitoring, and observability. Skilled in building cloud-native, secure, and maintainable applications following clean architecture and best coding practices.

## Professional Summary:

- ❖ Strong expertise in **Object-Oriented Programming** and **Python application development**.
- ❖ Proficient in **Python, Flask, Django**, and **REST API** for building scalable web applications and APIs.
- ❖ Hands-on experience with **RESTful API design**, integration, and backend development.
- ❖ Skilled in **Data Processing and Analysis** using **Pandas** and **NumPy**.
- ❖ Experienced in developing **UI components using Angular** and integrating them with backend services.
- ❖ Strong experience in **Azure Cloud**, including **Azure CI/CD pipelines**, **Azure MySQL**, and **PostgreSQL**.
- ❖ Experienced in **end-to-end application development**, including design, development, debugging, and deployment.
- ❖ Proficient in **database design and management** using **MySQL** and **PostgreSQL**.
- ❖ Good understanding of **software architecture patterns**, MVC, and clean coding practices.
- ❖ Strong analytical, troubleshooting, and debugging skills with experience in **manual testing**.
- ❖ Ability to work independently, collaborate in agile teams.
- ❖ Quick learner with strong adaptability to **new technologies and cloud-based environments**.
- ❖ Proficient in **Java, J2EE**, and core Java technologies.
- ❖ Hands-on experience with **Spring Framework** (Core, MVC) and **Hibernate ORM**.
- ❖ Experienced in developing web applications using **Servlets and JSP**.
- ❖ Good understanding of **MVC architecture** and enterprise application design.
- ❖ Skilled in implementing **design patterns** and clean coding practices.
- ❖ Ability to work independently and collaborate effectively within **Agile teams**.

## Certification:

### Microsoft Certified: Security Operations Analyst Associate

Certification Number: 040DBA-EC18A4

Earned On: June 18, 2025

Expires On: June 19, 2026

## TECHNICAL SKILL SET:

|                            |                                                  |
|----------------------------|--------------------------------------------------|
| Python Frameworks          | : Django, Flask, FastAPI                         |
| Third party Libraries      | : Pandas, NumPy                                  |
| Java EE Web Component APIs | : Servlet, JSP                                   |
| Java EE Resource APIs      | : JDBC                                           |
| Web Development            | : HTML5, CSS3, JavaScript, JQuery, AJAX, Angular |
| Unit Testing               | : Junit, unittest, pytest                        |
| Application Servers        | : Tomcat, JBoss, WebSphere, Apache               |
| IDE                        | : Eclipse, PyCharm                               |
| Other Tools                | : SVN, Log4J, Cygwin, GIT, Putty                 |
| Languages                  | : C, JAVA, PYTHON, PHP                           |
| Database                   | : MySQL, Oracle                                  |

## RELEVANT EXPERIENCE:

- ✓ Jul-2020 to Jan-2026 Centific Global Technologies India Private Limited, Working as a Senior SDET is located in Hyderabad. (WFH Srikakulam Hometown).
- ✓ Jan-2015 to Jul-2020 SWEKEN IT Solutions Pvt Ltd, Worked as a Technical Architect/Project Manager, located at Visakhapatnam.
- ✓ Dec-2007 to Sep-2011 SoftVins Solutions, Worked as a Programmer, located at Visakhapatnam.
- ✓ May-2005 to Nov -2007 Datapro Info World Pvt Ltd, Worked as a Software Trainer and academic Projects Developer, located at Visakhapatnam.

## QUALIFICATION:

- 70% **Master of Computer Applications (MCA)**  
At Raghu Engineering college, Visakhapatnam, Affiliated to JNT University, Kakinada in the year 2014.
- 53% **Bachelor of Science in Computers (BSc)**  
At Gayatri Vidya Parishad Degree College, Visakhapatnam Affiliated to Andhra University.
- 61.7% **Board of Intermediate**  
At Visakha Jr. College, Srikakulam.
- 61% **SSC**  
At Santhinikethan Public School, Srikakulam.

## Projects Stack

### Project-Name : PayPal Localization

Description : Integrate LLM solutions into existing content management and localization workflows and platforms and ensure seamless interoperability between the relevant tools and technologies. Partner with linguists and other localization experts to ensure the models are contextually and culturally appropriate.

#### Role & Responsibilities

- Designed and integrated LLM-based solutions into existing content management and localization platforms using Python.
- Developed and exposed RESTful APIs using Django REST Framework and FastAPI to enable seamless interoperability between LLM services and enterprise tools.
- Collaborated closely with linguists and localization experts to ensure language models were context-aware, culturally appropriate, and linguistically accurate.
- Coordinated with dataset owners and stakeholders to collect, validate, and manage large-scale datasets for model training and evaluation.
- Implemented data validation, preprocessing, and API-based model inference pipelines to support scalable LLM workflows.
- Ensured secure, reliable, and performant integration of AI services within existing systems.
- Integrated **Angular front-end applications** with REST APIs, ensuring secure data exchange, proper error handling, and optimized performance.
- Built **user-friendly UI components using Angular**, enabling efficient interaction with AI-powered features and backend services.
- Optimized application performance using **lazy loading, efficient API calls, and component lifecycle management** using **Angular**.
- Implemented **error handling, user notifications, and loading indicators** for improved user experience.
- Collaborated with backend, cloud, and product teams to translate business requirements into **intuitive UI workflows**.

### Project-Name : AutoTagger

Description : The project focused on enhancing threat detection and response capabilities using key Microsoft Azure security components such as Defender, Sentinel, Entra ID, Purview, and Threat Intelligence. It involved organizing and classifying security data to improve visibility and enable faster triage. As part of the **AutoTagger for Microsoft (Azure Security)** initiative, a security prompt-response mechanism was implemented, where each system-generated response was evaluated and tagged as satisfied or unsatisfied to support continuous improvement in threat analysis.

#### Role & Responsibilities

- Developed **Python-based modules** to collect, process, and manage **security prompts and system-generated responses** within the AutoTagger application.
- Implemented **prompt-response evaluation logic** to automatically **tag responses as satisfied or unsatisfied**, supporting continuous improvement in threat detection and analysis.
- Integrated AutoTagger workflows with **Microsoft Azure security services**, including **Defender, Sentinel, Entra ID, Purview, and Threat Intelligence**.
- Organized and classified **security telemetry and threat intelligence data** to improve visibility and enable faster incident triage.
- Integrated **Angular applications with RESTful APIs** (Django REST Framework) for real-time data exchange and model inference results.
- Validated prompt and response accuracy by cross-checking results in the **Woodgrove portal**, ensuring reliable and high-quality security insights.
- Optimized UI performance using **lazy loading, component lifecycle management, and efficient API consumption**.
- Collaborated with security analysts to refine **prompt strategies and tagging rules** for improved threat response effectiveness.

|              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Project-Name | : <b>CCP (Cloud Central Platform)</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Software     | : Python, Django, Angular-9, HTML, CSS, MySQL, Azure MySQL.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Description  | : Cloud Central Platform (CCP) this platform is used to migrate from legacy application system to cloud environment. where it helps you to find the cost of multiple cloud platform and compare with the existing system and generate the report. And show the cloud strategies for the existing application in 6R's (Rehost, Replatform, Rearchitect, Refactor, Retain, Retire). Auto Deploy the application in cloud platform. Shows Detailed Dashboard for CloudOps, SecOps, FinOps and common thread across all these modules is generative AI that is Talk2Clouds module to deploy and migrate application. |

Where we can query related to our cloud Deployments and Cloud Infrastructure like What is the security vulnerabilities and what is my last month cloud spending. So, we have make made sure that, at each of these stages, we are using Gen AI baked into this so that the solution is also complete and in you know up in times with what is trending out there

#### Role & Responsibilities

- I worked as a **Data Engineer** using **Python, Django, Azure, and MySQL** technologies.
- Selected and managed appropriate **database systems (MySQL on Azure)** based on application needs.
- Designed and optimized **database schemas, tables, and data columns** to ensure data quality, integrity, and performance.
- Wrote and optimized **SQL queries** for efficient data storage, retrieval, and reporting.
- Managed and maintained data storage, ensuring **data consistency and elimination of duplicate records**.
- Developed **RESTful APIs using Python and Django Framework** for data processing and integration.
- Deployed and managed applications and databases on **Microsoft Azure**.
- Integrated **Angular front-end applications with backend REST APIs** (Django/Python) to display real-time cloud infrastructure, security, and cost data.
- Built **dynamic reports and charts** to present cloud spend trends, security vulnerabilities, and deployment status.
- Handled **Cloud FinOps and SecOps data analysis and reporting** using the **CoreStack application**.

|              |                                                                                                                                                                                                                                                                                                            |
|--------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Project-Name | : <b>SmartOps</b>                                                                                                                                                                                                                                                                                          |
| Software     | : Angular-9, HTML, CSS, Bootstrap, Python Flask API Development, and Azure Blob Storage                                                                                                                                                                                                                    |
| Description  | : The SmartOps Cloud solution project build with a combination of services<br>- Cloud Adoption (Discovery, Decision Tree, Multi-Cloud ROI)<br>- Application Modernization (Legacy & Cloud Native)<br>- Data Modernization (Migration & Ingestion)<br>- Cloud Ops (FinOps, DevOps, SecOps, IT Ops, DataOps) |

#### Scope:

The scope includes the development of a single cloud platform User Interface that will offer end-to-end cloud management services to enterprises. The platform must include a front-end user interface that is accessible through the web. The solution will have the following features:

Application Portfolio Analysis (Discovery + Decision Tree + ROI Analysis)

Cloud Governance Framework

Bring more control & visibility

Real-time project management

#### Role & Responsibilities

- Designed and developed **Python Flask-based REST APIs** to handle data processing and persistence.
- Implemented secure data storage and retrieval using **Azure Blob Storage** and relational databases.
- Built and maintained **responsive UI screens** using **Angular-9, HTML, CSS, and Bootstrap**.
- Integrated frontend components with backend APIs to enable **end-to-end cloud management workflows**.
- Supported features such as **application portfolio analysis, cloud governance, and real-time project tracking**.
- Collaborated with cross-functional teams to ensure **scalable, reliable, and user-friendly** cloud platform functionality.

|              |                                                                                                                                                                                                                                                                                                                                                                            |
|--------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Project-Name | : Pricing Work Sheet                                                                                                                                                                                                                                                                                                                                                       |
| Software     | : Angular-9, Python, Django, HTML, CSS, MySQL                                                                                                                                                                                                                                                                                                                              |
| Description  | : PWS-Web-App is an online Pricing Work sheet application, which provides a platform for Leader, Business Owner's, and Project Manager to view/track/submit an equivalent excel pricing worksheet. The opportunity IDs are in sync with Dynamics 365, which gives direct control to the Business Owner's and Project Manager's to submit the pricing for a given customer. |

The sync with people soft and jump cloud will help the Project Manager's to keep a track of all the available employees, with their job grade, department name, Business unit and their respective Standard Labour Rate. The Expenses can also be tracked monthly along with the revenue against the total budget and margin. It provides clear information about each SBU involved in a particular customer's PWS.

#### Role & Responsibilities:

- Collaborated with **Business Owners and Project Managers** to gather and analyze **business requirements** for the Pricing Worksheet web application.
- Designed application architecture and proposed **technical solutions** using **Python, Django, Angular-9, and MySQL**.
- Designed and developed a **web-based single cloud platform UI using Angular 9**, delivering end-to-end cloud management capabilities.
- Built **modular, reusable Angular components and services** to support Application Portfolio Analysis, Cloud Governance, and real-time project management features.
- Integrated **Angular frontend with Flask-based REST APIs** to enable seamless data flow and real-time updates.
- Developed **interactive dashboards and data visualizations** for discovery, decision-tree analysis, and ROI insights.
- Developed and integrated **backend services and REST APIs** to synchronize data with **Dynamics 365, PeopleSoft, and JumpCloud**.
- Planned, coordinated, and reviewed **application releases** across **development and production environments**.
- Optimized application performance using **lazy loading, efficient API calls, and component lifecycle management**.
- Ensured seamless **integration with internal enterprise systems** for employee, pricing, and financial data tracking.
- Deployed and maintained the application on **Linux servers**, ensuring stability and performance.
- Worked closely with cross-functional teams to support **budget, revenue, margin, and expense tracking** across SBUs

Project-Name : AAASOM.COM  
Software : PHP, CodeIgniter, HTML, CSS, JQUERY, MySQL  
Description : AAASOM is a service provided for mobile and web applications, for home, office or industry need. This application deals with different services like Plumbing, AC repair, Electrician or any kind of repair, maintenance or new things to be built, getting skilled workers and good service providers on time. Using this application, anyone can schedule/book a service through the AAASOM App. It is quick and very easy. AAASOM mobile or app can be used to choose the right service, pick your location, schedule as per your time and we will send skilled and trusted service professionals to your premises in minutes with a warranty of service.

AAASOMSP mobile app is Service Providers app, the skilled service provider can get service booking from customer (user). The service provider can renew his service, and apply his own rate card for his service, can see his number of bookings received, rating etc.

#### Role and Responsibility

- The functional requirements and Logics.
- Developing the search pages in JQuery.
- Payment Gateway and SMS Gateway, Mail Service.
- Facebook and g-mail login authentication.
- Service Bookings and Service Provider Handling and Customer Care Handling.
- Testing and Operations of the application.

Project-Name : VMS2020.COM  
Software : PHP, Laravel, SAP HANA  
Description : The Visitor Management System/Vendor Management System (VMS) is a virtual manages a comprehensive Business Management System to manage company or organization, employees, teams, projects, clients and many modules and allow the user to track visitors, assets and deliveries as they enter and exit the facilities. In addition, the VMS shall allow the user to keep track of contractors and consultant time sheets, track which Employees have regular personal Visitor, secure Visitor Log, clearly identify Visitors by category to restrict access to vulnerable goods and information, generate end of day reports to ensure regulatory compliance. Reports section to analyze project status, no of folks working for project, percentage of task completed and assign task, create sub task, how much time taken for each task, and online attendance with location tracking, push notifications, employee leave management and more.

#### Role and Responsibility

- Logic Development and Project workflow design.
- Team Management and testing the application.
- Data Management using SAP HANA.
- Payment Gateway and SMS Gateway, Mail Service.

Project-Name : dande.in  
Software : Spring, Hibernate, Restful Web Services, Angular, Servlet, JSP, MySQL

Description : Dande is an E-commerce website and a unique platform to get All the eco-friendly electronic bikes and bike like batteries spare parts products for selling. It provides some blogs written by energy certified auditors.

#### Role and Responsibility

- Complete Functionality and Logics.
- Analysis of the specified Transactions provided by clients.
- Database Management using Hibernate.
- Developing the JSP pages along with AngularJS.
- Payment Gateway and SMS Gateway Handling.
- Create Child Orders as per Products in Order.
- Shipping and Order Handling.

Project-Name : valuex.sweken.com  
Client : Singapore  
Software : Struts, Spring, MySQL, Web Services, WebSphere, Maven.  
Description : It's Monarch Migration Project. The MetLife application has distributed around 194 applications. All applications must migrate from Web Sphere 6.1 to Web Sphere 8.5. To support WebSphere 8.5, we need to upgrade all the following.  
1) Service and Client Migration from Apache Soap to JAX-WS  
2) Service and Client Migration from JAX-RPC to JAX-WS

#### Responsibilities:

I'm responsible for the following activities.

- Understand the survey books and prepare playbooks.
- Involved in preparing the migration approach documents.
- Migrated Apache Soap Web services to JAX-WS Web Services.
- Migrated JAX-RPC Web Services to JAX-WS Web Services.
- Involved AD Team Meetings and understand the legacy applications
