

JANMEJAYA JENA

Hyderabad, India 500038 | 8018582135 | janmejaya.jena007@gmail.com

Summary

Senior Software Engineer with a minimum of 2+ years of work experience, expert proficiency in React Full-stack development, and proficient in developing dynamic Android and iOS applications using React Native. Strong experience in responsive UIs, JavaScript, RESTful APIs, and mobile application architecture. Skilled in back-end development using Node.js and Express.js, hands-on experience of implementing secure authentication using JSON Web Tokens, data management with MongoDB. Committed to providing users with the best experience in both mobile and web dimensions through innovative solutions and efficient designs.

Experience

Senior Software Engineer

07/2022 to current

Dexterous Technology

Hyderabad

Working as a Senior Software Engineer at Dexterous Technology, Hyderabad from November 2022 to the present date, my core competencies include React, full-stack development, and React Native for Android. Design and develop dynamic web applications by developing UIs to optimize mobile solutions for comfort in user experience. Collaborate with cross-functional teams to define project requirements, assure high-quality software delivery, and resolve technical challenges that will result in application performance improvement. I am committed to best practices, performing code reviews, and mentoring junior developers to ensure continued innovation and improvements within the team.

Skills

Front-End Development

React JS
Next JS
Java Script
Jquery
Redux ToolKit
Redux
Material UI
Ant Design
HTML 5
Tailwind CSS
SASS
CSS 3
Bootstrap 4&5

Back-End Development

Node.JS
Express.JS
RESTful API
JWT Token
Cloudinary

Database Management

Mongo DB

Native Development

React Native
Expo JS
Firebase

Hosting Platform

Git
Hostinger
Netlify
Render
Vercel

Payment Gateway

PayTM
RazorPay

Key Projects

EwShopping

May 2024 to current

<https://ewshopping.com/>

As a Senior Software Engineer at EwShopping, I guide a team of full-stack developers to develop an e-commerce platform that focuses on clothing, electronics, and footwear. The overall platform will include a user-friendly website, a feature-rich admin panel, an efficient seller panel, and all those features required to provide seamless functionality to customers, administrators, and sellers. It allows for easy site navigation, dynamic product displays, enriched search filters, and personalized recommendations with the power of intelligent algorithms. It integrates Razorpay and Paytm for secure payment gateways. Performance optimization techniques will be used, including caching and efficient database queries, to make sure that it can bear high volumes of traffic easily. The admin panel will provide aggregated control over all inventories, order processing, user analytics, and promotional campaigns, hence helping administrators take an overview of the whole operation. The seller panel allows vendors to manage product listings, sales backtracking, order processing, and earnings tracking, ensuring very smooth collaboration between the platform and partners.

This project will be based on RESTful APIs that provide smooth interaction between the frontend and the backend in a very fast and reliable way. This set of APIs is designed for scalability to support further growth and enhancements of the platform. Rigorous testing and quality assurance processes ensure system stability and security, with continuous support post-launch dealing with any challenges as quickly as possible. My point of focus, from development to deployment, has been to execute a high-performance, scalable, secure e-commerce ecosystem that ensures user satisfaction and drives business success.

My Golden Homes

Oct 2023 to current

<https://mygoldenhomes.com/>

I am working as a Senior Software Engineer for My Golden Homes, a complete real estate platform and Android application that was developed to make property listing and property searching smooth and painless. I lead end-to-end development of the web platform and mobile application using React and React Native, respectively, into one coherent and effective system. Advanced property searching and

filtering make for a great user experience on the platform, enabling one to explore and discover properties with ease. I designed and integrated RESTful APIs that handled property data, user authentication, and search capabilities on both platforms.

Within my capacity, I ensure that the interface between the web and mobile solutions is smooth, focusing on building an intuitive user experience. Later, I provide continuous technical support after launch, solve arising issues, and ensure seamless operations. I also oversee performance optimizations and API management, ensuring the platform runs efficiently while incorporating real-time updates on property availability and user feedback to enhance the service further.

KingKisanghar

Apr 2023 to Jan 2024

<https://kingkisanghar.com/>

As a Senior Software Engineer on the KingKisanghar project, I was the linchpin in the development of a robust grocery e-commerce platform, comprising a website, a dynamic admin panel, and an intuitive mobile application. Advanced product search, category filtering, personalized recommendations, and efficient shopping cart capability offer users a seamless shopping experience through the website.

The mobile app, developed on React Native, extends these functionalities toward Android devices, ensuring a swift and user-friendly interface for the convenience of end-users on-the-go. Both have integrated secure payment gateways for seamless and safe transactions, while various optimization techniques on performance assure scalability and high responsiveness even under peak loads.

The administrative panel is the backbone of this whole platform, which helps the admin manage the inventory, track the order, analyze user activity, and supervise promotional campaigns. RESTful APIs are at the core of the system to manage critical operations, such as product data handling, user authentication, order processing, and real-time updates to ensure synchronizations across the web and mobile platforms. Rigorous testing and deployment processes ensure system stability and security, while post-launch

monitoring and support ensure the continuity of the service provided. My contribution focused on platform feature development, providing seamless user experiences, and delivering a reliable, scalable grocery shopping solution tailored to user needs.

SaloonTreat

May 2024 to Aug 2024

<https://salontreat.com/>

I am a Senior Software Engineer working on SaloonTreat, an end-to-end comprehensive platform for barbers, comprising a website, vendor app, partner app, and Android app. It aims at simplifying the management of saloons while improving the booking experience for both the customer and service provider.

I lead the end-to-end development of the platform by using React and React Native to build an intuitive and fluid user experience. The platform features state-of-the-art appointment booking and management capabilities that will allow users to seamlessly schedule, manage, and discover salon services. I developed and integrated RESTful APIs for user authentication, booking data, and service management across the platforms.

In my position, I ensure that there is smooth integration between web and mobile solutions, focusing on usability and performance. I provide continuous technical support post-launch and address any issues Promptly with regard to optimization of efficiency. Furthermore,

I look at performance enhancements, handle secure data with MongoDB, Node.js, Express.js, and JWT tokens. Thus, I integrate real-time updates and user feedback to develop the functionality and satisfaction of the platform.

Education

B.tech in Electrical Engineering
