- Practiced debugging, code optimization, and version control basics

PROJECTS

AI-Powered predictive model for Heat Transfer

Jan 2025-apr 2025

- Developed an AI-based predictive system to forecast heat transfer rate, heat flux, and temperature behavior in industrial fluid flow systems.
- Implemented Bidirectional LSTM (Bi-LSTM) for time-series prediction using sensor data.
- Performed data preprocessing, feature engineering, and anomaly detection for industrial safety monitoring.
- Designed an interactive Streamlit web dashboard for data upload, visualization, and performance analysis.
- Integrated safety alerts and anomaly detection using statistical techniques (Z-score).
- Improved predictive accuracy compared to traditional heat-transfer models.
