PROJECT DETAILS

Virtually Assist customers through the Chatbot

I spearheaded a project to create an AI-powered chatbot for virtual customer assistance, utilizing cutting-edge IT technologies, such as artificial intelligence and natural language processing, to optimize customer interactions, answer inquiries, and streamline issue resolution. This innovative solution significantly improved overall customer satisfaction.

- We utilized Python, ML, AI, MySQL, HTML, CSS, and the Kore.ai platform to implement operations, contributing significantly to the project's success.
- In the chatbot project, my role spanned project planning, model training, continuous improvement initiatives, and rigorous testing, all of which were instrumental in achieving the project's successful development and sustained performance.

EXPERIENCE

Trainee

Palle Technologies, Bangalore

Project Name: Institute Management System

The project involves developing an Institute Management System in Python to efficiently manage student data, automate administrative tasks, and provide data analysis capabilities for educational institutions. The main features of this project are that the admin can insert student details, view all students in a table format, and update or delete student details.

- In this project, I utilized Python, Django, MySQL, HTML, and CSS to implement CRUD (Create, Read, Update, Delete) operations, contributing significantly to the project's success. This hands-on experience allowed me to further develop my skills in web development and software engineering.

ADDITIONAL SKILL

INDIAN STOCK MARKET

- I possess the proficiency to leverage Fibonacci series analysis as a strategic tool for identifying key support and resistance levels in financial markets, enhancing my ability to make informed trading decisions.
