

Raja Kiran R

A seasoned **Python Developer** with good experience in **Python Development, and Data Analysis** across various domains.

Location Preference: **Bengaluru**

+91-9391112212

✉ rajakiran306@gmail.com

Profile Summary

- Have more than 5 + years of total IT development experience in **all phases of the SDLC as a Python Developer across various domains.**
- Good experience in working with data analysis projects using libraries such as **Sklearn, Numpy, Pandas, Keras, Matplotlib, Seaborn for Data Visualization**
- Experience with database technologies, especially PostgreSQL/ NoSQL databases or other data-store solutions.
- Good applied statistics skills such as distributions, statistical testing, regression and probabilistic modeling. Hands on experience in end-to-end design, development, and deployment of predictive modeling solutions.
- Expertise in manipulating and analyzing complex, high-volume, high-dimensionality data from varying data sources and big data sources
- Hands on experience in **Development of various features, Data analysis, Data Mapping, Extraction, and Transformation** using various types of data processing.
- Hands on experience in handling projects across multiple domains like BFSI, eCommerce etc. Had good communication and client interaction skills
- **Ability to learn** and adapt quickly to the emerging new technologies.

Core Competencies

Python	★★★★★
Pandas/NumPy	★★★★★
Data Analysis	★★★★★
Deep Learning	★★★★★
Data Science	★★★★★
BFSI Domain	★★★★★
ETL Process	★★★★★

Career Timeline

- Currently working as a **Software Engineer II** at LexisNexis Risk Solutions Pvt Ltd. (Dec 2022 to till date)
- **Worked as a Python Developer (Software Engineer) at Magic Base Royal BD Pvt Ltd** from Sep 2018 – Dec 2022

Projects:

Designation: Software Engineer II (Python Developer)

Project Name: National Credit File (NCF) – FIDO

Duration: Dec 2022 to till date

Project Description: Design and develop an efficient data process framework to process large volume of data for National Credit File product using Azure Databricks and Data factory.

Technology: Python, PySpark, JIRA, Confluence, MS Visio, VS Code, Databricks, REST API, MS SQL Server

Roles & Responsibilities:

- Worked on the end-to-end design, development, and deployment of data processing for National Credit File product.
- Extracting relevant information from the various data sources like API's, Database, Flat files in the form of rules and mapping file given by the user and extracting the information of relevant capacity information for a given consumes using Databricks framework.
- Generating complex ETL mapping information which gives the relevant information about the capacitor.
- Creating Single and Multiple links for the flows by using Stream lit library and for a given producer identify the consumer data and capacity information finding from large volume of data.
- Used PySpark to explore and preprocess the data which include filtering, cleaning, and transforming the data.
- Involved in development of common Python utilities to validate data and perform data validation.
- Generated Parquet files to Store the processed data in Azure Data Lake Storage
- Deployed the ETL framework in Azure data bricks and Integrated application to fetch data from various third-party systems using FastAPI and REST APIframework.

Designation: Python Developer

Project Name: NIFTY 50 & BANK NIFTY Price Prediction

Duration: Sep 2021 to Dec 2022

Project Description: Develop an efficient data analysis framework and data science models to predict NIFTY 50 & BANK NIFTY Price movement for next 5/15/60 minutes/next day intervals.

Technology: Python, Deep Learning, Keras, LSTM, Mongo DB, JIRA, MS Visio, VS Code, Pandas TA library

Roles & Responsibilities:

- Worked on the end-to-end design, development, and deployment of predictive modeling solutions.
- Developed common components using Python's numerical, data analysis, or AI frameworks such as NumPy, Pandas, Scikit-learn, Jupiter, etc.
- Involved in development of predictive/prescriptive analytics including Machine Learning algorithms (Supervised and Unsupervised) and deep learning algorithms and Artificial Neural Networks

Project Name : Insurance factors identification

Duration: July 2020 to Aug 2021

Project Description:

Develop a data analysis framework and data science model that classifies a customer based on various risk factors. It takes the data of third-party motor insurance claims in Sweden for the year 1977 to current date. In Sweden, all motor insurance companies apply identical risk arguments to classify customers, and thus their portfolios and their claims statistics can be combined. The data were compiled by a Swedish Committee on the Analysis of Risk Premium in Motor Insurance.

Technology:

Python, SKlearn, NumPy, Pandas, MySQL, TensorFlow, VS Code, Azure MLOps

Roles & Responsibilities:

- Collaborated with stakeholders to understand the business problem and define the scope of the image classification task.
- Translated business requirements into technical specifications and model design.
- Identify and gathered relevant image datasets for training, validation, and testing.
- Preprocess and clean the data, including resizing, normalization, data augmentation, and handling class imbalances.
- Chosen an appropriate pre-existing convolutional neural network (CNN) architecture or design a custom architecture suitable for the image classification task.
- Fine-tuned hyperparameters, such as learning rate, batch size, and optimization algorithm.
- Trained the model using labeled training data and monitor training progress using metrics like accuracy, loss, and validation performance.
- Evaluated model performance using validation and test datasets to ensure generalization and avoid overfitting.
- Tune model parameters and hyperparameters based on validation results.
- Conducted experiments to optimize hyperparameters like learning rate, dropout rates, and optimizer settings to improve model performance.

Project Name:

Consumer Product Recommendation

Duration:

Sep 2018 to June 2020

Project Description:

Provide relevant product recommendation for customers using Data Analytics

Technology:

PySpark, Python, JIRA, MS Visio, MS Office Suite, Tableau

Roles & Responsibilities:

- Worked on the end-to-end design, development, and deployment of predictive modeling solutions.
- Developed common components using Python's numerical, data analysis, or AI frameworks such as NumPy, Pandas, Scikit-learn, Jupyter, etc.
- Involved in development of predictive/prescriptive analytics including Machine Learning algorithms (Supervised and Unsupervised) and deep learning algorithms and Artificial Neural Networks
- Had involved in development detailed business insights from complex data and multiple sources.
- Research, investigate, model, and develop strategic insights that can aid the transformation of our ongoing business performance
- Involved in development of Dashboarding presentations like Daily, weekly, monthly reporting of KPI.
- Create/update internal external documentation to help support all customer processes
- Provide feedback to product management team by identifying key product changes to improve efficiencies and overall customer experience
- Hands on experience with SQL scripting (Oracle, MS SQL) and involved in development of complex queries and performance tuning.

- Facilitate root cause analysis for incident reports and identify continuous improvement opportunities in areas of people, tools, and/or process changes

Education

 **MBA specialized in HR** from **Krishna University** in May **2018**

 **B.Sc** specialized in **Computer Science** from **Krishna University** in March **2016**

Technical Skills

Programming Languages: Python, SQL

Business Analysis Tools: MS Visio, MS Word, Share Point, JIRA, MS Excel, Tableau

Data Science Packages: SKlearn packages, Pandas, NumPy, Matplotlib, Seaborn.

Databases: Snowflake, Oracle, MySQL

Platforms and Misc.: AWS S3, Lambda Function, Step Functions, Azure Cloud Services

Personal Details

Gender : Male

Status : Unmarried
